

Sudan Customs Authority

Presented by

Captain\ Osama Abdelwahab Hamid

Captain\ Badreldin Yousif

Current Situation

- ❑ We use SOClass framework version 2.2.29 and ASYWorld UN version 4.3.2.
- ❑ Over than 60 Customs stations uses the ASYWorld application server.
- ❑ Some ASYWorld required modules locally developed, and more under development.
- ❑ Our ASYWorld exchange data with other government agencies through **database-links** (ex: Bank of the Sudan , Taxation Chamber , Police Traffic Administration, ... etc).
- ❑ We use only **ASYWorld web service facility in e-payments.**

Aim

- ❑ To interconnect with all relevant agencies through better solution recommended by UNCTAD (ex : web service technology).
- ❑ It's not an aim itself but ASYWorld developers should undergo systematic and leveled training under the direct supervision of the UNCTAD Organization to customize asycuda professionally upon their countries' requirements.

Thanks for your attention
