Multidimensional Poverty Index (MPI)

## The Afghanistan Multidimensional Poverty Index (A-MPI)

*Launched  
2019*

MPI poor			Monetary poor
Total	Poor	Non-poor	Non-poor
45.5	15.4	30.1	Poor
54.5	36.3	18.2	Total
100	51.7	48.3	

MPI and monetary poverty levels are similar – over 50% of people are poor. But one-third of income-poor people are not MPI poor and vice versa.

Inaction would be dangerous cautions report

Multidimensional poverty is highest among children between 0-9 years, the Bhutan Multidimensional Poverty Index (MPI) 2017 finds.

The report, which the National Statistics Bureau (NSB) released yesterday, states that among the 13 MPI indicators, the largest contributors to national poverty in are deprivations in years of education (32%), followed by child mortality (29%) and school attendance (13%).

"This finding indicates children are especially vulnerable and highlights the need to analyse child poverty further and invest explicitly in its reduction," the report states.

A total of 8.4 percent of people who live in households where the head had no education are MPI poor compared with only 0.2% of people with heads having studied beyond grade 8C.

However, multidimensional poverty has almost been halved in the last five years. The report states that MPI fell from 0.051 to 0.023 between 2012 and 2017. The MPI is the product of percentage of poor people and the average intensity of poverty.

Today, Bhutan's multidimensional poverty rate is estimated at 5.8 percent of the population against 12.7 percent five years ago. This indicates that poor people in Bhutan experience 2.3 percent of the deprivations that would be experienced if all people were deprived in all indicators.

The Bhutan MPI monitors 13 indicators - food security, low education and inadequate

Director Chimmi Tshering said Bhutan's MPI, based on the data from the Bhutan Living Standard Survey 2017 has become a strong instrument for resource allocation, targeting, and policy design, complementing Bhutan's monetary poverty measure.

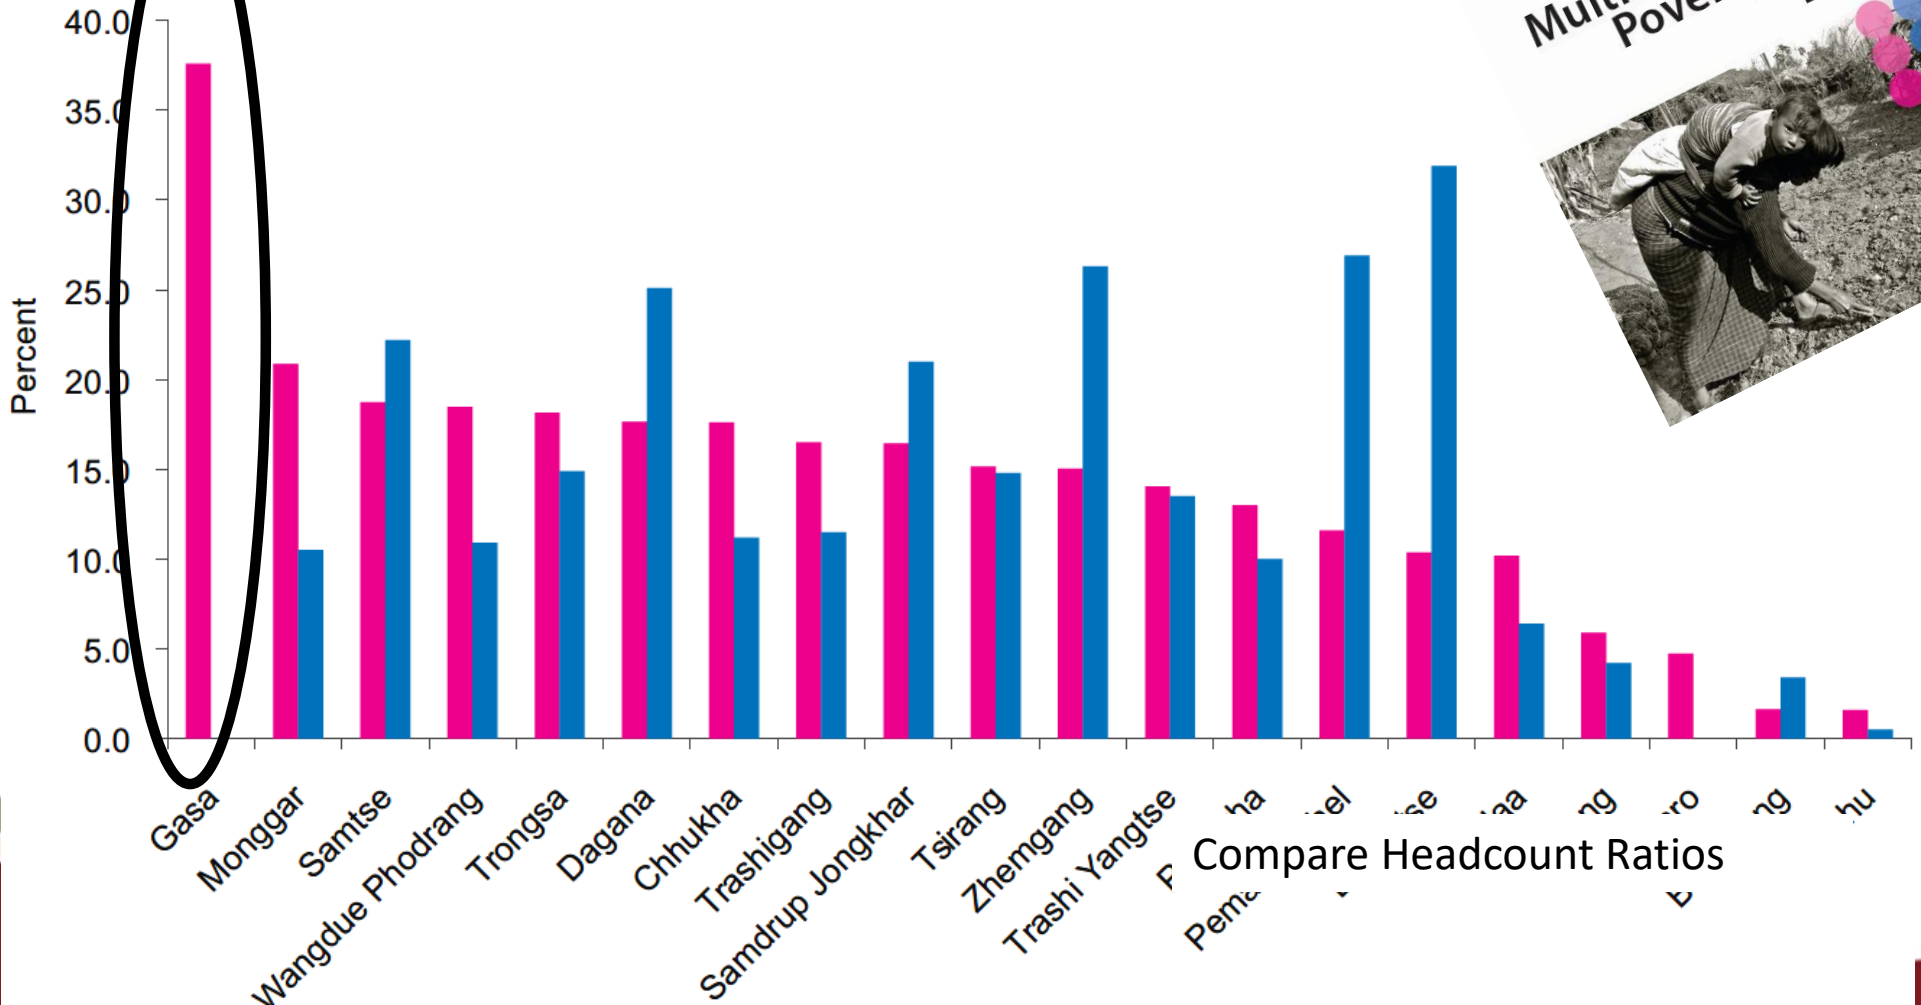

Health Minister Tandin Wangchuk who launched the report, said that target 1.2 of the Sustainable Development Goals calls all countries to cut their national MPI rates by half between 2015 and 2030.

"Bhutan's track record in MPI reduction released today shows that this target is possible," Lyonpo said, adding that going by the poverty reduction in the dzongkhags the poorest areas are catching up with the less poor areas.

The report, which was financially supported by the UNICEF country office in Bhutan, is the first update of Bhutan's national Multidimensional Poverty Index since 2012. The National Statistics Bureau and Oxford University's leading centre on multidimensional poverty, Oxford Poverty & Human Development Initiative (OPHI) worked on the report

# In Bhutan: Gasa, the poorest district by national MPI, is not income poor.

## Govt formulating framework to lower poverty

(Web Desk) – The federal government has been formulating an effective plan for the implementation of the National Framework for Developing Social Protection Policies for lowering the ratio of poverty in Pakistan.

The draft framework is expected to be completed on the priority basis, and would be presented for approval at a competent forum.

According to sources in the Planning, Development and Reforms Division, the government utilises two parameters to ascertain and report level of poverty in Pakistan: Cost of Basic Need (CBN) and Multidimensional Poverty Index (MPI) methods.

## Beyond the data: What does being poor in the PHL mean?

By **Cai Ordinario** - April 18, 2019

### Ratio, requirements

CURRENTLY, the government has two measures to determine how many Filipinos remain poor. The first measure is based on the FIES while the other, which is the most recent one that was developed by the PSA, is the Multidimensional Poverty Index (MPI).

The poverty data computes for the threshold and from there determines how many households meet this income level. This can be done since the FIES collects both income and expenditure per household.

# Policy makers are using their national MPIs to:

1. **Complement** monetary poverty statistics
2. Track poverty over time (official statistics)
3. **Allocate resources** by sector and by region
4. **Target** marginalized regions, groups, or households
5. **Coordinate** policy across sectors and subnational levels
6. **Adjust** policies by what works (measure to manage)
7. **Leave No One Behind** see the poorest & track trends
8. **Be Transparent** so all stakeholders engage – NGOs,
  - Private Sector etc, all parts of government.

## Govt. looks to reduce poverty rate to 5% by 2018

🕒 April 18, 2017   📁 Lead Story   💬 Leave a comment   👁 2,871 Views

While the country is prospering and the economy in good shape, the government is aware that there is still a large portion of Bhutanese who have to deal with poverty on a daily basis, Prime Minister Tshering Tobgay said during the Meet The Press session last week.

Lyonchoen said that there has been a comprehensive package to address the needs of the poor living in the 75 villages.

“The problem is with the poor many a times the poorest of the poor escape our attention, not just the government but the whole of society,” he said. “The poorest of the poor are those who don’t even know how to ask for help.”

The Gross National Happiness Commission conducted a survey to map the poorest of the poor which consisted of 3,154 households. This number was later revised to 2,678 households. Many of these households are beneficiaries of the REAP programme, and many of them are receiving His Majesty The King’s kidu.

“Now we know house by house with names and why they’re poor,” Lyonchoen said. He said the government is at a stage where it might be able to consider individualised plans for these households.

In keeping with the need to ensure that poverty reduction efforts are well-defined in terms of targeting population, designing projects, using funds, implementing measures, appointing village personnel, and achieving outcomes, we will work to see that assistance programs become more effective so that people living in poverty in rural areas have adequate food and clothing and are able to access compulsory education, basic medical care, and safe housing.

## Dimensions

**CHINA**

**Compulsory Education (9 years)**

**Basic Medical Care**

**Safe Housing (includes water etc)**

**Adequate Food and Clothing**

**Sufficient income and livelihood.**

Aim: end this poverty by 2020.

# Colombia

This allows us to design an integral and intersectoral public policy

Education	Childhood and youth	Employment	Health	Access to public utilities and household conditions
<p><b>Illiteracy</b> 1 million households</p> <p>—</p> <p><b>Low educational achievement</b> 2.1 million households</p>	<p><b>Lack of access to early childhood care services</b> 307 thousand households</p> <p>—</p> <p><b>School absenteeism</b> 293 thousand households</p> <p>—</p> <p><b>School underachievement</b> 1.3 thousand households</p> <p>—</p> <p><b>Child labour</b> 290 thousand households</p>	<p><b>Long – term unemployment</b> 457 thousand households</p> <p>—</p> <p><b>Informal employment</b> 2.2 million households</p>	<p><b>Lack of health insurance</b> 670 thousand households</p> <p>—</p> <p><b>Lack of access to healthcare service</b> 454 thousand households</p>	<p><b>Lack of access to improved water sources</b> 677 thousand households</p> <p>—</p> <p><b>Inadequate wall materials</b> 140 thousand households</p> <p>—</p> <p><b>Inadequate floor materials</b> 408 thousand households</p> <p>—</p> <p><b>Critical overcrowding</b> 545 thousand households</p> <p>—</p> <p><b>Inadequate sanitation</b> 714 thousand households</p>

- In 2015 we had **9,6 million** people in multidimensional poverty in **2,2 million** households.
- To achieve our goal of **1,5 million** fewer people in multidimensional poverty we have to work with 6 different governmental sectors.
- Directing our actions to this population makes us **more efficient**. With the same resources we can achieve several goals simultaneously in a austerity scenario.

## Minister of Health, Colombia

To advance on health, I need the support of my colleagues, as **what they do has a big influence on health.** The actions of the minister of environment, and housing, and drinking water programmes matter; so do the educational attainments of the populations.

We, in the ministry of health, have to find out what happened from our policies and investments. And here the MPI is a monitoring tool. We use the MPI to identify problems, and to inform citizens about the impact of our specific sectoral policies. It **makes change visible.**

## Multidimensional poverty halved, but highest among children

December 31, 2017 News Leave a comment 2,023 Views

### Inaction would be dangerous cautions report

Multidimensional poverty is highest among children between 0-9 years, the Bhutan Multidimensional Poverty Index (MPI) 2017 finds

# Focusing on Children

STRATEGIES THAT WORK

# Child Poverty

Poverty is disproportionately about children. They comprise nearly a third of the world's population, but half of all of the multidimensionally poor people.

Tony Lake, UNICEF

Global MPI 2018:

Half the world's poor people are children under 18.

We have more poor children on the planet than ever before

# Why Measure?

- In order to inform action to end poverty

This is the same for **National Poverty**  
and for  
**Child Poverty**

Both use measures. **How can we build in a synergy?**

# Implications

Measure poverty in order to inform action to end poverty

To have a high likelihood of policy uptake a poverty measure must be:

**Accurate and Replicable**

**Informative for policy design**

**Useful to monitor progress**

**Easy to Understand**

**Complementary to existing tools**

**Nationally owned and operated**

Think ahead to policy uptake!

Table 2.1 Bhutan's National MPI: Dimension, Indicator and Deprivation Cutoff

Dimension (weight)	Indicator (weight)	Deprivation Cutoff	
Health (1/3)	Child Mortality (1/6)	A child has passed away in the household	
	Food Security (1/6)	The household suffers a shortage of food	
Education (1/3)	School Attendance (1/6)	Any school-aged child (6-14 years) in the household is not attending school up to class VIII	
	Schooling (1/6)	No household member has completed five years of schooling	
	Cooking Fuel (1/21)	The household cooks with dung, wood or charcoal	
	Sanitation (1/21)	The household's sanitation facility is not improved or it is shared with other households	
Living Standard (1/3)	Electricity (1/21)	The household has no electricity	
	Water (1/21)	The household does not have access to safe drinking water or safe water is more than a 30-minute walk (round trip)	
	Road (1/21)	The household is more than 30-minute walk from the road head	
	Housing (1/21)	The household does not have adequate materials in two of: floor, wall and roof	
	Asset (1/63)	The household does not own more than one of: radio, telephone, TV, bike, motorbike or refrigerator; and does not own a car or truck	
	Land (1/63)	The rural household does not own more than one acre of land	
	Livestock (1/63)		The household does not own more than three of: cattle, horses, sheep, goats, chickens, pigs, buffalo, yaks

# Observations and Challenges

1. A Child MPI should **not compete** with a National MPI. Rather, a child focus should **synergise & activate action**.
2. **Linking** Child Poverty to a National MPI may be higher impact than building a stand-alone Child MPI:
  - National MPI is already understood, used, official
  - Policy recommendations for shared indicators may clash
3. Strategic Analyses => an **Integrated approach**:
  1. Insert a 'child' focus into standard disaggregations
  2. Explore gender, age, intra-household for child indicators.
  3. *Sometimes*: enrich with a linked in-depth Child MPI.

# Child Poverty & National MPI: 4 Strategies

1. Include key Child Indicators in National MPI
2. Always Disaggregate the National MPI by age
3. Do Intrahousehold Analysis of MPI (age, gender)
4. Use a Child MPI that directly links to National MPI

# 1. Include key Child Indicators in National MPI

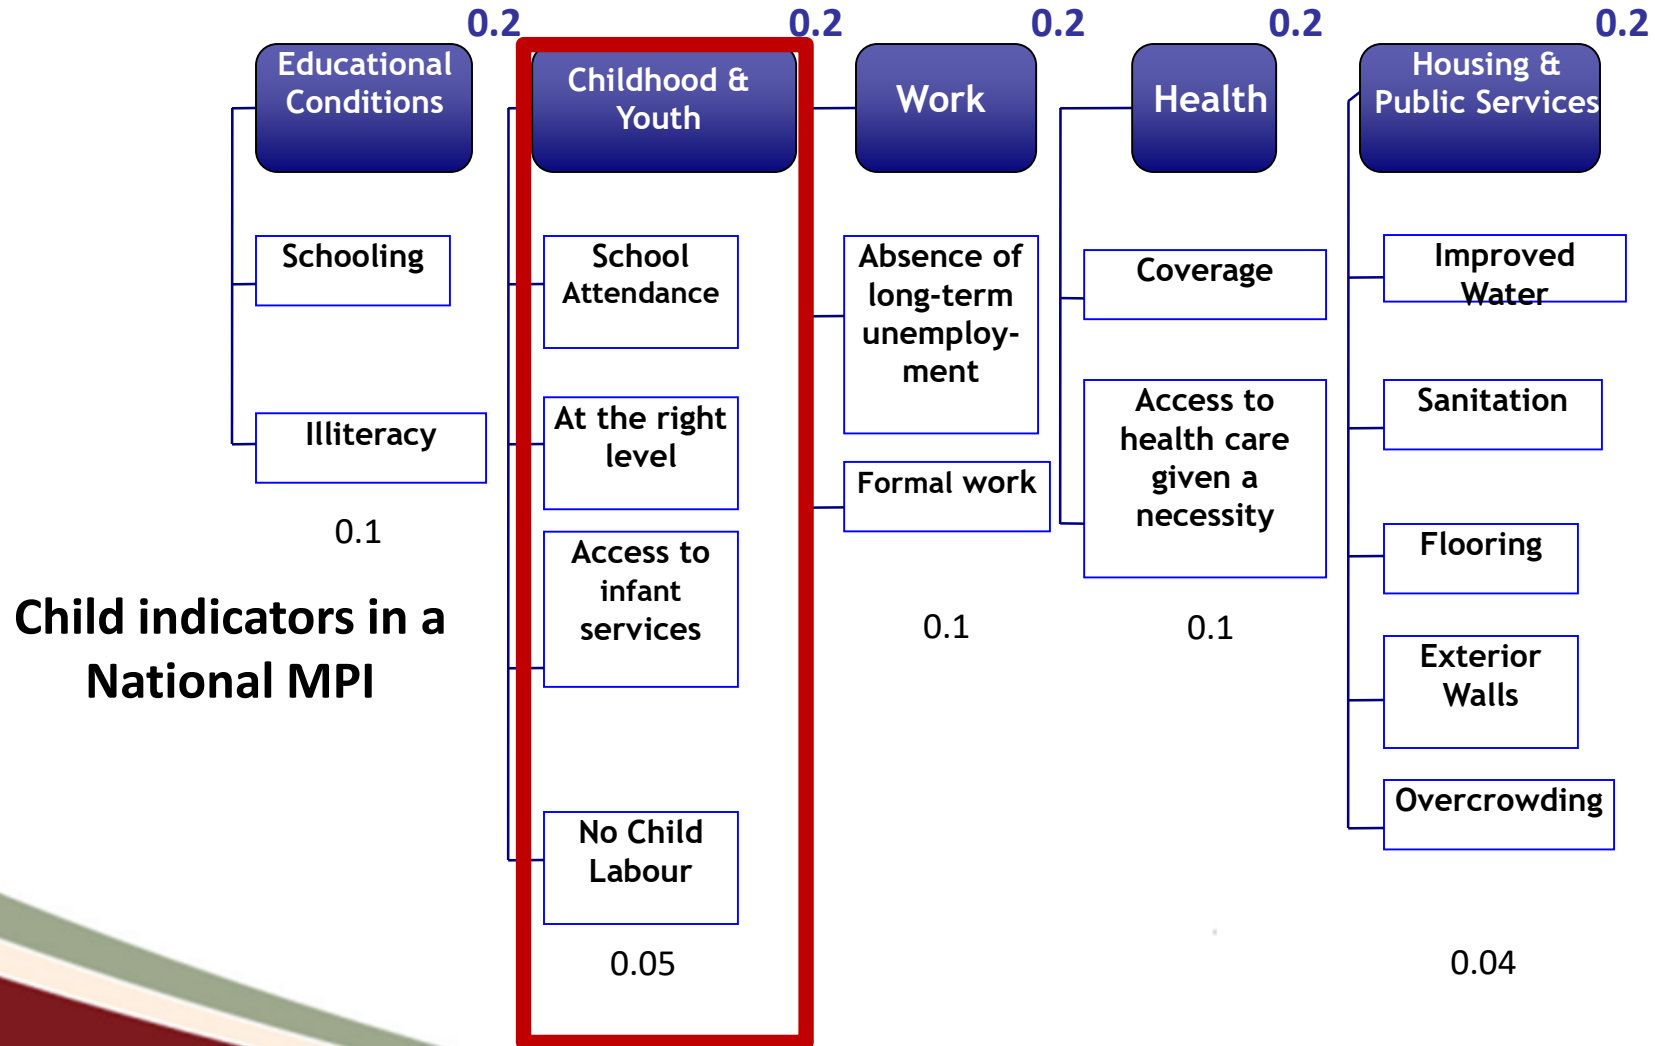

## Examples:

- School Attendance
- Correct Grade for Age (Rezago)
- Not in Education Employment or Training-NEET
- Malnutrition
- Child Labour

Can also be a **Childhood and Youth Dimension**

# MPI-Colombia Childhood as a dimension

# Indicators in National MPIs

Dimensions	Indicators	Global MPI	LAC-MPI	Arab MPI	Armenia	Bhutan	Chile	Colombia	Costa Rica	Dominican Rep.	Ecuador	El Salvador	Honduras	Mexico	Mozambique	Nepal	Panama
Education	Years of schooling/School attainment	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
	School attendance	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
	School lag		✓				✓	✓	✓	✓	✓	✓					✓
	Early care for children							✓	✓	✓	✓	✓					
	Proximity to education services				✓		✓					✓					
	Educational quality				✓												
Health	Child mortality	✓		✓		✓				✓							✓
	Nutrition	✓		✓			✓										
	Food security					✓											
	Early pregnancy/FGM			✓													
	Ante-natal care																✓
	Assisted delivery																
	Immunization																
	Health insurance						✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
	Impact of illnesses									✓							
	Access to health services				✓		✓	✓				✓		✓			✓
Quality of health services				✓													
Termination of usual activity				✓													

Nearly Every MPI to date includes School Attendance.

Many MPIs include something on age-for-grade, and pre-school.

# Indicators in National MPIs

Dimensions	Indicators	Global MPI	LAC-MPI	Arab MPI	Armenia	Bhutan	Chile	Colombia	Costa Rica	Dominican Rep.	Ecuador	El Salvador	Honduras	Mexico	Mozambique	Nepal	Panama
Education	Years of schooling/School attainment	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
	School attendance	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓		✓	✓
	School lag		✓				✓	✓	✓	✓		✓					✓
	Early care for children							✓	✓	✓		✓					
	Proximity to education services				✓		✓										
	Educational quality				✓												
Health	Child mortality	✓		✓		✓				✓							✓

	Social networks						✓			✓							

Many MPIs include Child Labour

## 2. Always Disaggregate National MPI by age

1. Compare level of MPI/H for children vs adults
2. What % of all poor people are children.

Note: Both depends upon the structure of MPI

## **AGE DISAGGREGATION: GLOBAL MPI 2019:**

**Half of all multidimensionally poor people are children.**  
A total of 663 million children are living in multidimensional poverty.

**33.8% of children are MPI poor, vs 17.5% of adults:** One out of every three children are multidimensionally poor, whereas it's one in six adults.

**Where do these children live?** Eighty-five percent of poor children are growing up in South Asia and Sub-Saharan Africa

# 2. Always Disaggregate National MPI by age

## Nepal

5.5 Multidimensional Poverty by Age Group, 2014

Source: Calculations based on data from MICS 2014

## Bhutan

FIGURE 5.2 Multidimensional Poverty by Age Group, 2017

Source: Authors' calculations based on data from BLSS 2017

## Afghanistan

### 3. Do Intrahousehold Analysis of MPI

1. Which MPI variables draw on individual child data?
2. Restrict the sample to children
3. Go back to micro-data and analyse it:
  1. What % of deprived children are girls / boys?
  2. What % of deprived children are MPI poor vs non-poor?
  3. Within a household, are all children deprived, or only some – if so, what age, gender?
  4. What other household deprivations do poor children experience?

Health

Education

Living Standards

Nutrition

**Children:  
0-4 years**

Child mortality

Years of schooling

**10-17 years**

School attendance

**6-14 years**

Cooking fuel  
Sanitation  
Drinking water  
Electricity  
Housing  
Assets

Use the individual child data for these three indicators and explore patterns by gender, household composition, and so on.

# REGIONAL REPORT ON CHILD POVERTY IN SOUTH ASIA

AN UP-CLOSE, CONTEXTUAL AND GENDERED VIEW OF MULTIDIMENSIONAL CHILD  
POVERTY AND CHILD LEADERSHIP

*Forthcoming soon!*

An Oxford Poverty and Human Development Initiative (OPHI) and  
UNICEF Regional Office for South Asia Publication  
December 2018

In South Asia the percentage of school-age children who are multidimensionally poor and out of school varies by country

School-age children who are multidimensionally poor and out of school (percent)

Note: Out-of-school children are school-age children who do not attend school through grade 8.

Source: Alkire, Ul Haq and Alim 2019.

*Illuminating Inequalities 2019*  
citing UNICEF-funded  
academic study

## 4. Build a Child MPI that directly links to National MPI

1. Use the National MPI that policy makers understand
2. From the survey, construct a 'new' child dimension(s)
3. Use comparable indicators to cover children 0-17
4. Restrict the sample to children.
5. Compute the Child MPI – it shows additional child-specific deprivations of poor children. It also identifies children who are not MPI poor but are child MPI poor.

# Nepal C-MPI\*

**National  
MPI for  
Nepal**

Dimensions	Indicators	Weight National MPI (k=1/3)	Weight C- MPI (k=1/4)
<b>Education</b>	Years of Schooling	1/6	1/8
	Child School Attendance	1/6	1/8
<b>Health</b>	Child Mortality	1/6	1/8
	Nutrition	1/6	1/8
<b>Living Standard</b>	Electricity	1/18	1/24
	Improved Sanitation	1/18	1/24
	Improved Drinking Water	1/18	1/24
	Housing	1/18	1/24
	Cooking Fuel	1/18	1/24
	Assets Ownership	1/18	1/24
<b>Child</b>	Child Development		1/8
	Childhood Conditions		1/8

**Additional  
Child  
Indicators**

\* Draws on work in progress with Ana Vaz and Chris Oldiges

# Child poverty: the urge to integrate

- **Ownership:** Most countries spend 1-3 years building political consensus and statistical skill to make a permanent official MPI

*Would this be possible for 'Child-MPI'?*

- **Policy use:** Most national MPIs are used for policy design, coordination, for budget allocation, targeting and coordination.

*Would a Child-MPI conflict with National – e.g. for water?*

- **Simplicity:** There is a live concern of 'statistical overload' – having a national and child MPI can confuse so dampen action.

*Could a C-MPI be linked to Nat'l MPI?*

# Child Poverty & National MPI: 4 Strategies

1. **ALWAYS** Include key Child Indicators in National MPI
2. **ALWAYS** Disaggregate the National MPI by age
3. **ALWAYS** Do Intrahousehold Analysis (age, gender)
4. **OPTIONAL** Use a Child MPI that directly links to National MPI

# A New online Handbook in 2019!

## How to Build a National Multidimensional Poverty Index (MPI): Using the MPI to inform the SDGs

United Nations Development Programme (UNDP) and  
Oxford Poverty and Human Development Initiative (OPHI), University

In response to the considerable demand from countries on how to build national MPIs, UNDP and OPHI launched a National Handbook on MPI in July 2019.
