Regional Workshop on Time Use Statistics: Methods and Uses

Group 2

Tunis, 10 -12 October 2023

- # Benefits

✓ Data collection methodologies

    o Linking options to goals

    o Advantages and disadvantages of each methodology

    o Using modern electronic technologies

    o Countries' experiences

- # Benefits

✓ data usage

- The importance of adopting a list of key indicators and aligning them with national priorities

- Participation of the most important data users in the survey preparation stages to determine priorities

- Ensure that the outputs meet the measurement of sustainable development goals and national development programmes

- Training on mechanisms and methods for calculating indicators

- # Countries' experiences

Each experience has its distinctive characteristics, and in general, the offers submitted by countries were benefited through:

- Identify the mechanisms used to collect and extract data,

- Use a unified classification,

- Learn about the different methods of estimating the value of unpaid work (housework, ..),

- Methods of analyzing and disseminating results.

- # Challenges and proposals

- **<u>Challenges</u>**

- ❑ The statistical culture of the general public towards all household surveys and towards the time use survey in particular

- ❑ Conduct time use surveys independently and periodically → No financial allocations

- **<u>Proposals</u>**

- ❑ Building on successful experiences in this context regarding the use of modern technology in data collection

- ❑ Participate with decision makers and explain the developmental importance of these surveys in order to overcome difficulties related to financing

- ❑ Taking advantage of the advantages of modern technology

Thank you for your kind attention
