

SUSTAINABLE DEVELOPMENT GOAL INDICATOR 12.7.1.

Main concept, methodology and reporting process

Presentation Contents

- I. Introduction to Sustainable Public Procurement
- II. SDG Indicator 12.7.1 assessment methodology
- III. Reporting on SDG Indicator 12.7.1

I. Introduction to Sustainable Public Procurement (SPP)

■ **SDG 12.7:** Promote public procurement practices that are sustainable, in accordance with national policies and priorities

SUSTAINABLE DEVELOPMENT GOALS

SUSTAINABLE DEVELOPMENT GOALS

SDG 12

- **Goal 12:** Ensure sustainable consumption and production patterns
- **Target 12.7:** Promote public procurement practices that are sustainable in accordance with national policies and priorities
- **Indicator 12.7.1** Number of countries implementing sustainable public procurement policies and action plans

Part 1. Introduction to Sustainable Public Procurement

What is Sustainable Public Procurement?

Beginnings

- ❖ It is nothing new
 - ❖ First experiences in 19th and 20th centuries
 - ❖ Addressing social justice issues
 - ❖ Fair working conditions
 - ❖ Fair pay
 - ❖ Integration of the disabled
 - ❖ In parallel to the Welfare State
-

Beginnings

- ❖ Progressive extension to other fields
 - ❖ Promotion/protection of disadvantaged groups
 - ❖ Anti-discrimination

 - ❖ Progressive concern for environmental degradation and its effect on social health and development
-

Why Sustainable Public Procurement?

13% of GDP in OECD countries (2015)
10-15% of GDP assumed as the worldwide average (2015)
16% of GDP in the EU (2017)

Graph: Procurement as % of GDP in low-income, lower middle income, upper middle income and high-income countries (World Bank 2016)

EU: 2 trillion euros US: 1.7 trillion USD

Resource Consumption

Two Cups of Coffee a Day

- 129 liters of coffee a year.
- 8 kilograms of coffee beans
- **5.5 kilograms of fertilizer**
- **A few grams of highly toxic pesticides**
- 19.5 kilograms of coffee pulp
- **Clear cutting of forests to grow even more coffee**

Source: Scott Case

Resource Consumption

One ton of virgin paper requires 98 tons of resources to produce.

Source: Scott Case

Every single purchase has hidden human health, environmental, and social impacts throughout the entire supply chain.

PLASTIC POLLUTION: HEALTHCARE WASTE

DEFORESTATION: PALM OIL / RUBBER PLANTATIONS

CONFLICT MINERALS, SLAVERY

Impacts & Opportunities

| Environmental | Social | Economic |
|---|--|--|
| <p>Environmental factors affect the natural systems on which life depends, now and in the future.</p> | <p>Social factors affect the social systems on which communities depend, now and in the future.</p> | <p>Economic factors affect the health of the markets on which commerce depends, now and in the future.</p> |
| <ul style="list-style-type: none"> + biodiversity preservation + climate adaptation + resource optimization + soil health stewardship - acidification - desertification - eutrophication - freshwater pollution - greenhouse gas emissions - habitat depletion - human health impacts - land use change - marine pollution - ozone depletion - radiation pollution - resource depletion - smog - waste - water consumption | <ul style="list-style-type: none"> + anti-discrimination + community engagement + diversity/equal opportunity + employee engagement + equal remuneration + fair trade + freedom of association + grievance & remedy processes + human rights + indigenous rights + occupational health & safety + right to collective bargaining + sustainable compensation + training and education + worker rights - child labor - forced/compulsory labor - human trafficking - sourcing from conflict zones | <ul style="list-style-type: none"> + fair dealings + innovation research / investment + open competition + transparency of information + use of diverse suppliers + use of HUB zones + use of local suppliers - conflicts of interest - corruption (bribery, extortion...) - dividing territories - dumping - exclusive dealing - misleading market claims - monopoly (seller collusion) - monopsony (buyer collusion) - patent misuse - price fixing - product tying - refusal to deal |

Definition of SP

Sustainable Procurement (SP) is

*... the process whereby organizations meet their needs for goods, services, works and utilities in a way that achieves “**value for money on a whole life basis**” in terms of generating benefits not only to the organization, but also to society and the economy, whilst minimizing, and if **possible avoiding**, damage to the environment*

Definition of GPP

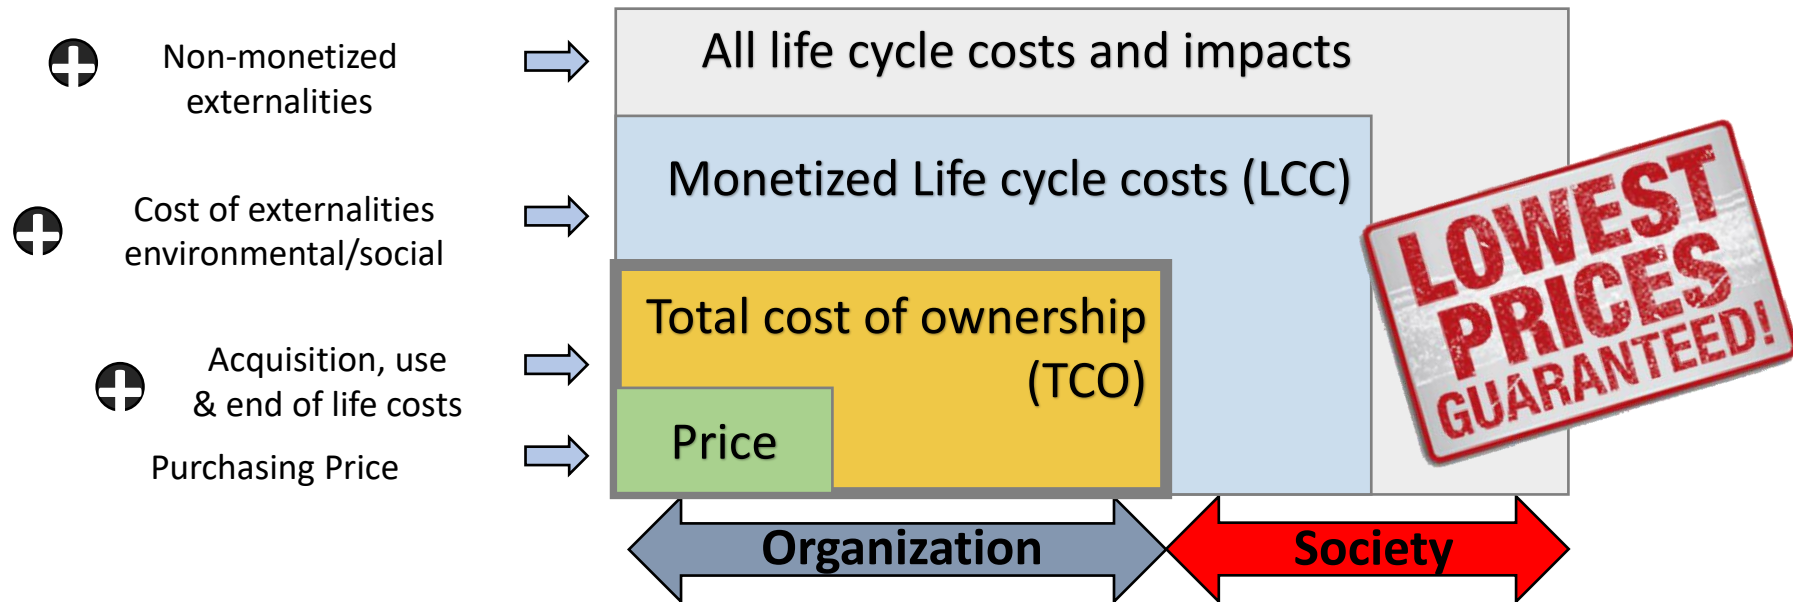

Green Public Procurement (GPP) is

“a process whereby public authorities seek to procure goods, services, and works with a reduced environmental impact throughout their life cycle when compared to goods, services and works with the same primary function that would otherwise be procured”.

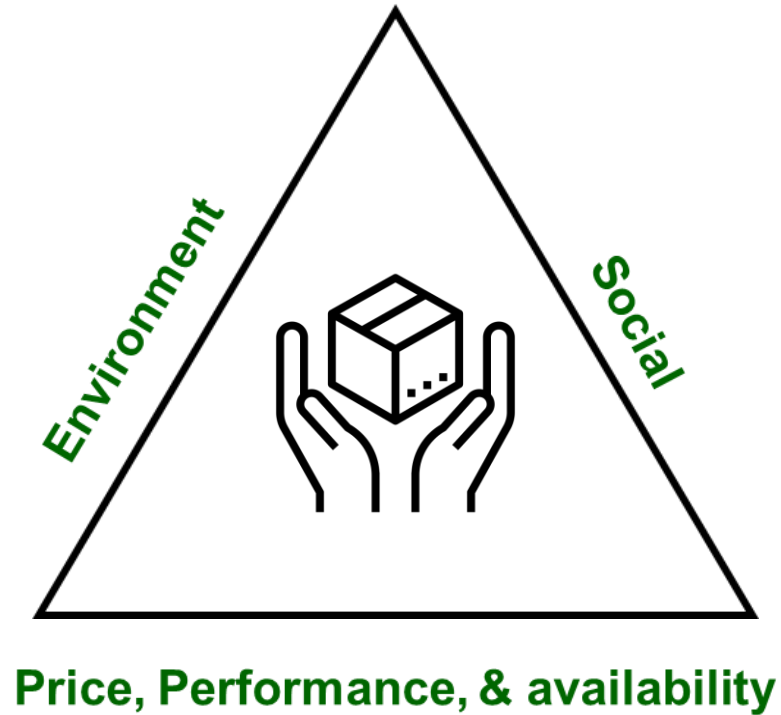

Definition adopted by the European Commission

Life Cycle Costing

Source: UN Environment / ISO 20400

Sustainable procurement is about buying better products from better companies

What is a more sustainable product?

- Challenge to define
 - Products that have a reduced environmental or social impact along their lifecycle
 - Ecolabels – information tools that help to identify and choose more sustainable products
-

What is a 'Green' Product?

- Can be recycled
- Have a recycled content
- Be energy efficient
- Emission reducing
- Re-usable
- Biodegradable
- Organic

Type I Ecolabelling

Patented Logo

Only the **best products** can be granted the use of the logo; Consumers may buy these products without doubt.

Part 2. overview of SPP implementation

A **global report** periodically reviewing the implementation of SPP

2013 Global SPP Review

<http://www.scpclearinghouse.org/resource/sustainable-public-procurement-global-review-2013>

2017 Global SPP Review

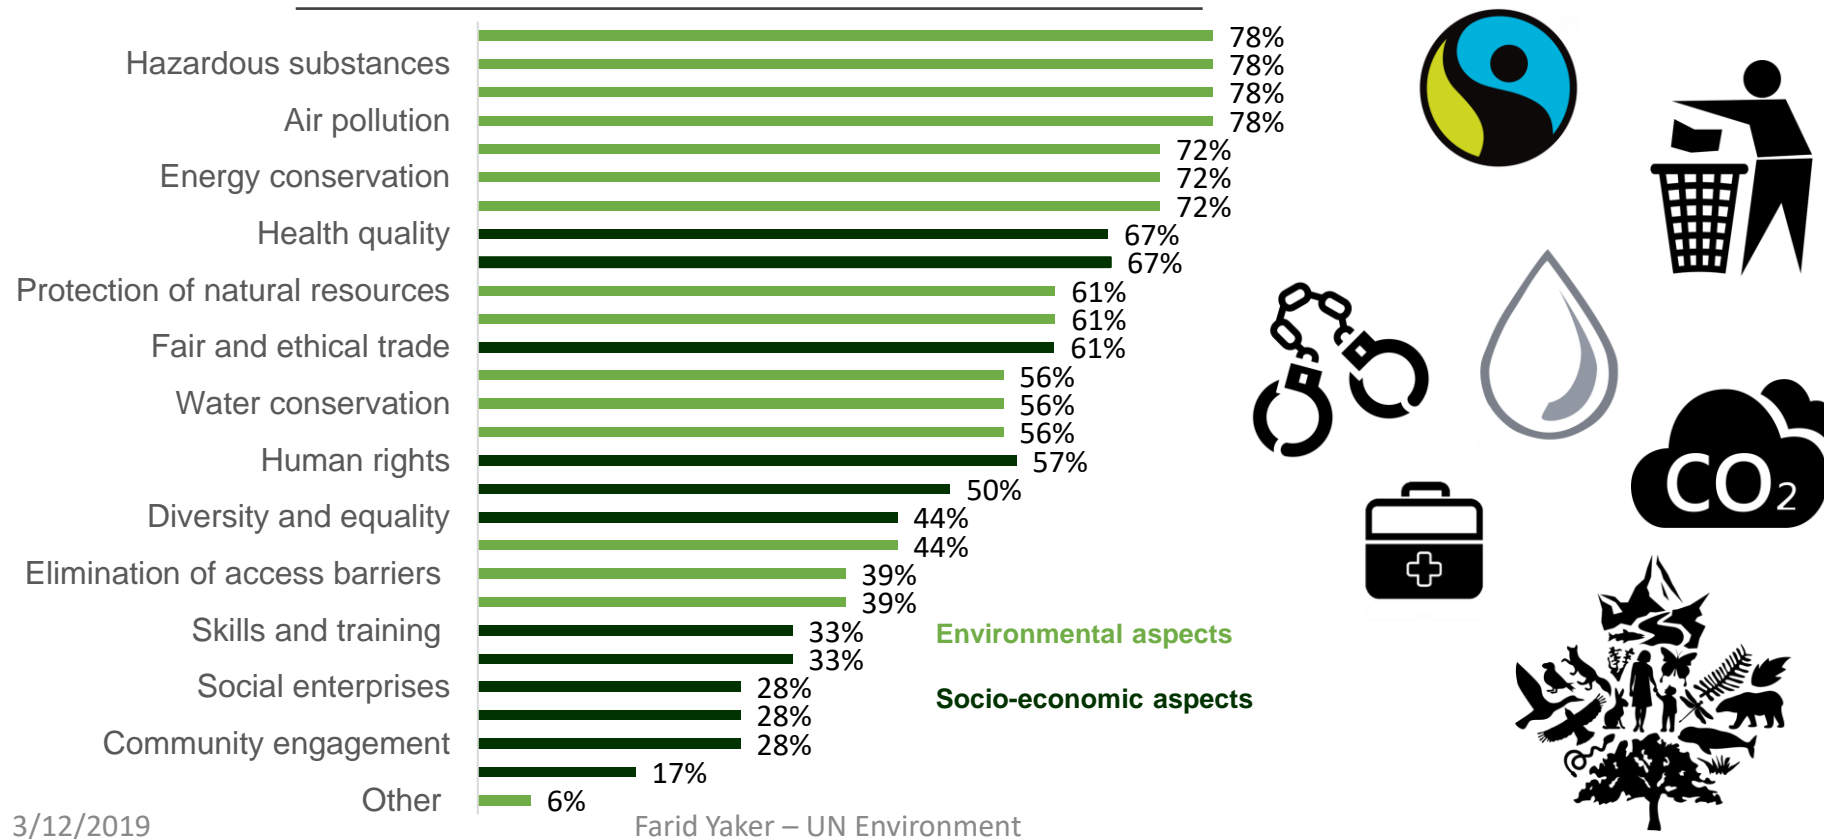

<http://www.scpclearinghouse.org/resource/2017-global-review-sustainable-public-procurement>

2021 Global SPP Review

Sustainability aspects addressed by SPP policies

Categories of products prioritized by SPP policies

Which categories of products, services and works are prioritised?

| | |
|--|-----|
| Office IT | 89% |
| Office paper and stationery | 85% |
| Vehicles | 70% |
| Cleaning | 67% |
| Furniture | 63% |
| Building design and construction | 59% |
| Building equipment | 59% |
| Building materials | 52% |
| Energy | 52% |
| Textiles | 52% |
| Food and catering | 44% |
| Chemical products | 37% |
| Household appliances | 37% |
| Infrastructure design and construction | 33% |
| Waste collection and street cleaning | 22% |
| Travel services | 15% |
| Works execution | 15% |

Barriers to SPP

- 33%** Perception that sustainable products and/or services are more expensive
- 33%** Lack of expertise on SP implementation
- 30%** Lack of policy commitments/goals/action plans
- 28%** Lack of strong political and organizational leadership on SP
- 28%** Lack of mandatory SP rules/legislation
- 26%** Lack of sustainable products and/or services to purchase
- 25%** Insufficient monitoring, evaluation and/or enforcement of SP policies
- 22%** Competing procurement policies
- 22%** Competing procurement priorities

SPP IN NATIONAL GOVERNMENTS

Switzerland

Uruguay

United States of America

II. SDG Indicator 12.7.1 assessment methodology

SDG Indicator 12.7.1. Methodological development

Sustainable Development Goal Indicator 12.7.1:

Number of countries implementing sustainable public procurement policies and action plans

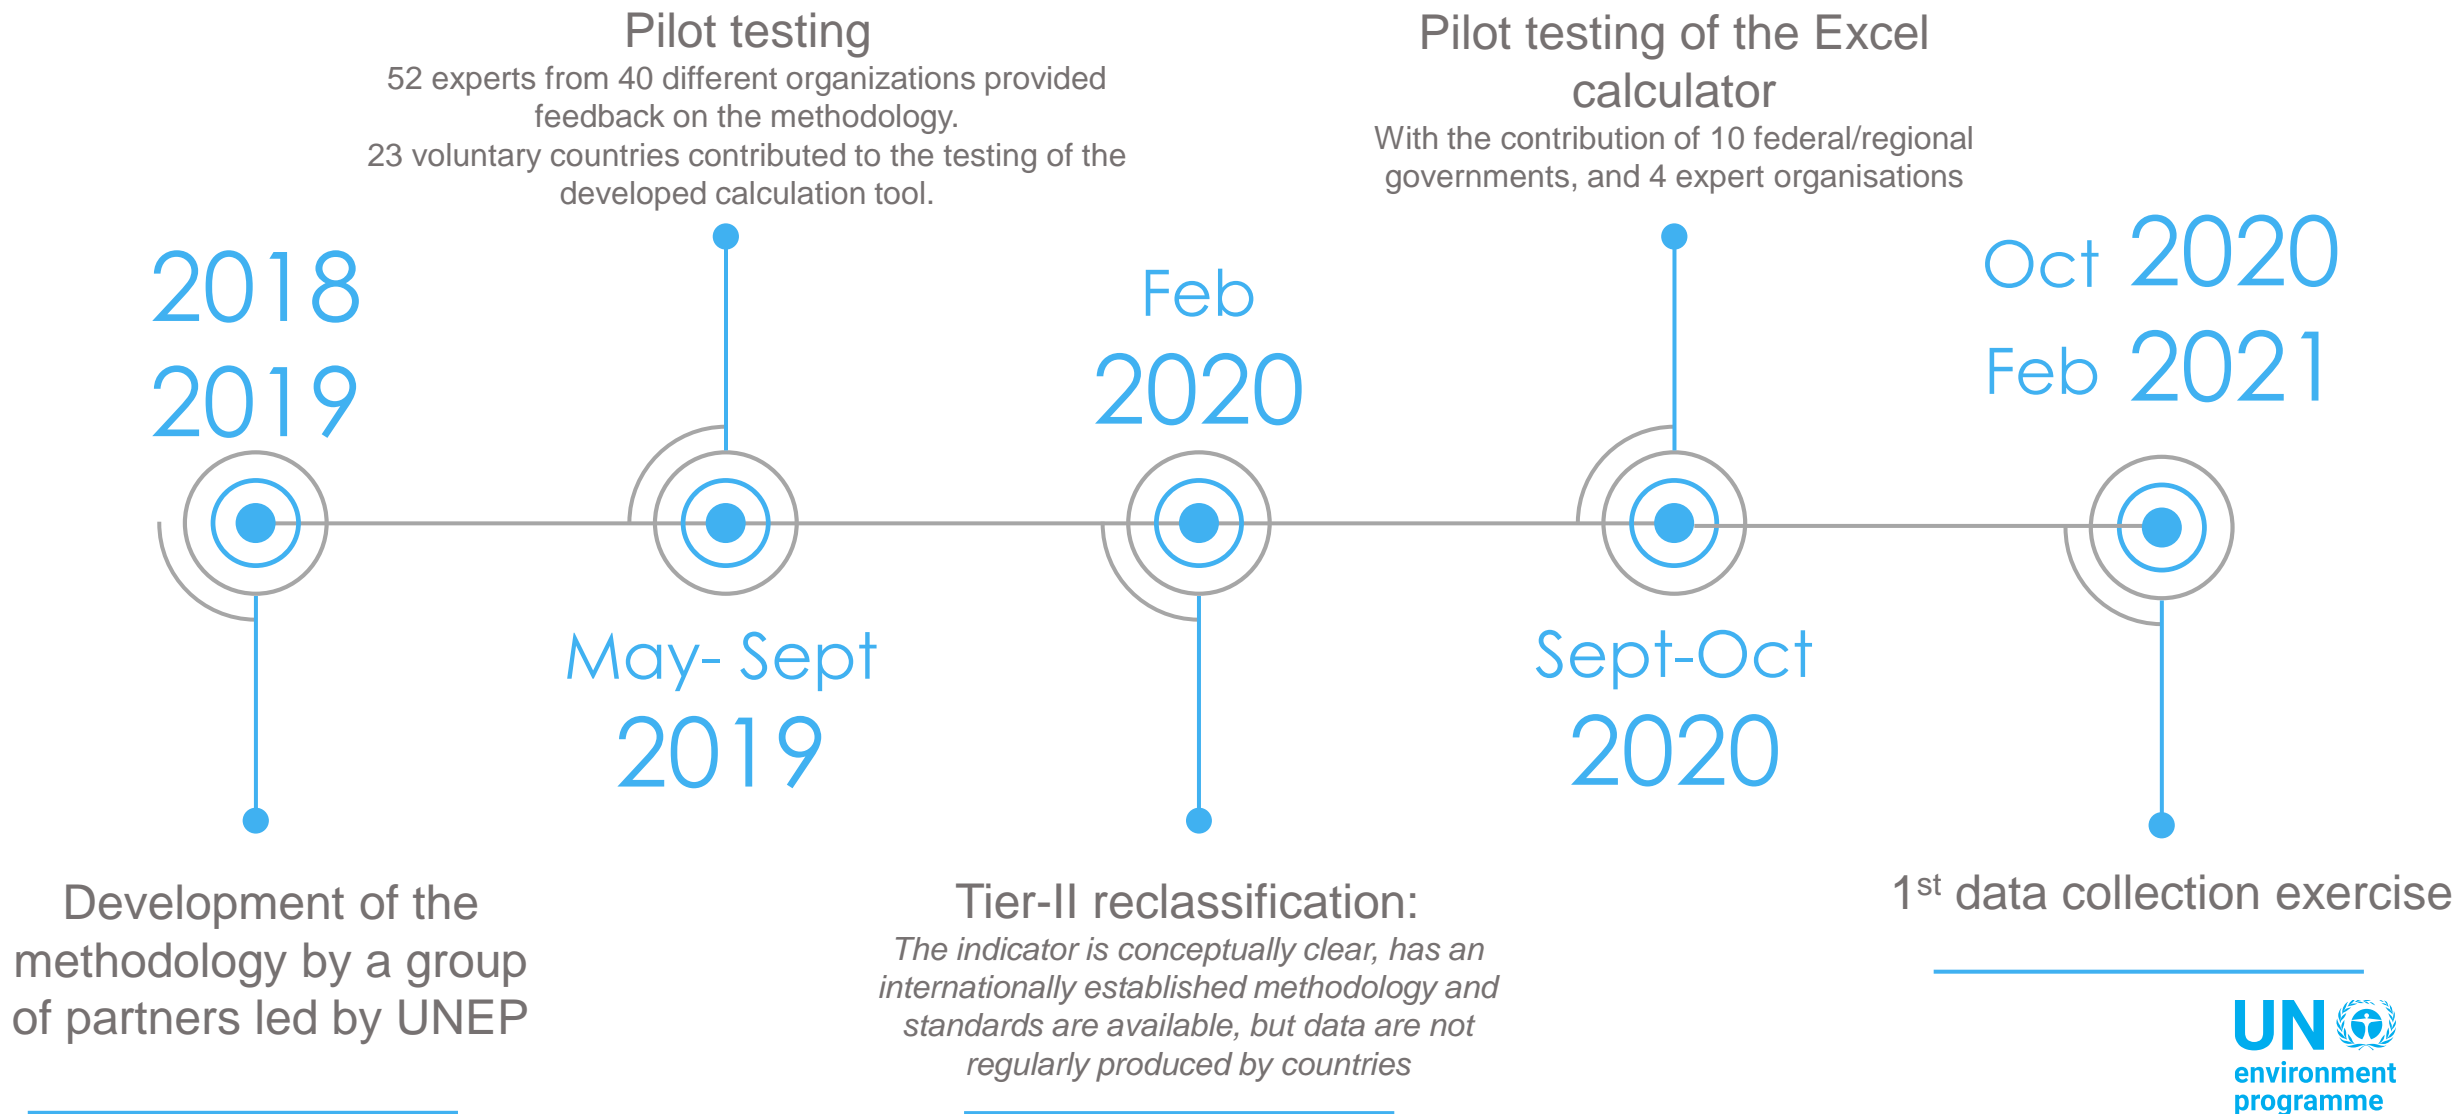

To allow for the measurement of this indicator, considering its **nature** and **name**, it appeared necessary to **evaluate**:

- a/ Whether SPP policies and action plans have been developed and adopted;
- b/ Whether those are implemented, or;
- c/ Whether SPP might be implemented through other means.

A detailed methodology **assessing the level of SPP implementation** in each country was therefore developed between 2018 and 2020 under the leadership of UNEP, with the contribution of experts and voluntary governments.

Indicator 12.7.1. Methodological development and 1st data collection

A specific methodology was developed to assess the **level of SPP implementation** in each country

How is SPP implementation evaluated?

SDG 12.7.1. Measurement methodology in detail

- The methodology aims at measuring a government's SPP implementation.
- It is **focused on policy and practical implementation aspects** of SPP, via 3 main aspects:

1 - What are the **measures taken** at **political and legal** levels to mandate/facilitate the implementation of SPP?

- A: SPP policies, action plans and/or SPP regulatory requirements
- B: Public procurement legal framework

2 - What are the **practical outputs** of SPP policy implementation, and the **support given to public procurement practitioners**?

- C: Practical support and guidance
- D: Environmental criteria and social considerations in public procurement

3 - Are the actual results and outcomes of SPP implementation **monitored**?

- E: Monitoring system
- F: Percentage of sustainable public procurement

SDG 12.7.1. Measurement methodology in detail

A: SPP Action plan / Policy

A: SPP policy, action plan, and/ or SPP legal dispositions (1 point, mandatory)

- A SPP action plan, policy and/or SPP regulatory requirements has/have been developed and approved by the government.
- Action plan, policy-related documents and/or relevant regulatory requirements should be accessible online.

SDG 12.7.1. Measurement methodology in detail

B. Public Procurement framework

B. Public Procurement regulatory framework conducive to SPP (1 pt)

- B(a) Provisions in the legal and regulatory framework allow for sustainability considerations to be incorporated at different stages of the procurement process (0.7 pts)

1/ Drafting technical specifications:

- Minimum (environmental / social) compliance criteria
- Type I Eco-labels, social labels, or relevant sustainability standards
- can be used as reference to specify the minimum level of compliance.

2/ Sourcing of suppliers: sustainability requirements can be specified as:

- Sustainability requirements can be specified as pre-qualification / exclusion criteria
- For example, suppliers may be asked to provide proof of compliance with social or environmental standards, evidence that they have adopted an environmental management system approach or a supply-chain management and tracking system.

SDG 12.7.1. Measurement methodology in detail

B. Public Procurement framework

3/ Drafting award criteria

- o Contract award can be based on **criteria other than price** (i.e. sustainability criteria), on "**Best Value for Money**" or "**Most Economically Advantageous Tender (MEAT)**" approaches.

- o **Life-cycle costing (LCC)** can be used in the evaluation of tenders.

4/ Contract performance:

- o **Sustainability requirements** can be specified in **contract performance clauses**.

For example: requiring an efficient use of resources such as electricity and water on construction sites; requiring reduced CO2 emissions associated with transport; asking for packaging to be taken away for reuse, for recycling or appropriate disposal of product.

SDG 12.7.1. Measurement methodology in detail

B. Public Procurement framework

B(b) Provisions in the legal and regulatory framework mandate (or only allow) the procurement of sustainable alternatives (0.3 pts)

- Voluntary
- Or, Mandatory, at least for some categories of products/services:
 - EU “Clean Vehicles” Directive “*making it mandatory for contracting authorities to take energy and environmental impacts into account when purchasing road transport vehicles*”.
 - Mandatory whenever specific labels or minimum sustainability criteria have been identified.

SDG 12.7.1. Measurement methodology in detail

C: Practical support

C: Practical support delivered to procurement practitioners on the implementation of SPP / GPP (1 pt)

- Guidelines and tools
- Best practice, case studies
- Regular communication of updated information
- Training sessions
- Helpdesk

SDG 12.7.1. Measurement methodology in detail

D: Environmental criteria / Social considerations

D: Environmental criteria / Social considerations

- **D(a): Environmental criteria have been defined, or labels** have been recommended for specific categories of products and services.
- **D(b): Social, economic or governance-related considerations** are considered in the practical implementation of SPP:
- **D(c): A risk-assessment or impact analysis** has been undertaken, ahead of the criteria drafting and prioritisation process, to identify procurement categories with the highest risks (e.g. in the Textiles supply chain).

SDG 12.7.1. Measurement methodology in detail

E: Monitoring of SPP

E (a) Monitoring of SPP action plan / policy implementation

- 1. Is the **progress of your SPP action plan / policy** implementation monitored?
- 2. Has a specific **target** been set for SPP implementation? (for example, % of contracts)
- 3. Is the **progress towards the achievement** of this target monitored?

E(b) Monitoring of SPP implementation

- 1. Is the **number and/or value of contracts with sustainability requirements** monitored?
- 2. Does monitoring also entail the **measurement of sustainability outcomes?**
(such as the monitoring of reduction in CO2 emissions, or the creation of green jobs)
- 3. **How** is data monitored?
 - via surveys, self-assessment, internal/external audit, or traditional reporting to management
 - via an information system
 - via an elaborate e-procurement platform

SDG 12.7.1. Measurement methodology in detail

F: Percentage of sustainable public procurement

F: Measurement of the actual percentage of sustainable public procurement (in value)

- Provision of the value of contracts which included sustainability requirements (e.g. total value of contracts for the purchase of green alternatives), per type of procurement spend.
- A percentage is calculated based on the part represented by those contracts in the total value of the government's public procurement spend.

How is SPP implementation evaluated?

SPP implementation score calculation

SPP implementation at government level is evaluated based on the calculation of the following score:

$$\text{Score} = A \times (B + C + D + E + F)$$

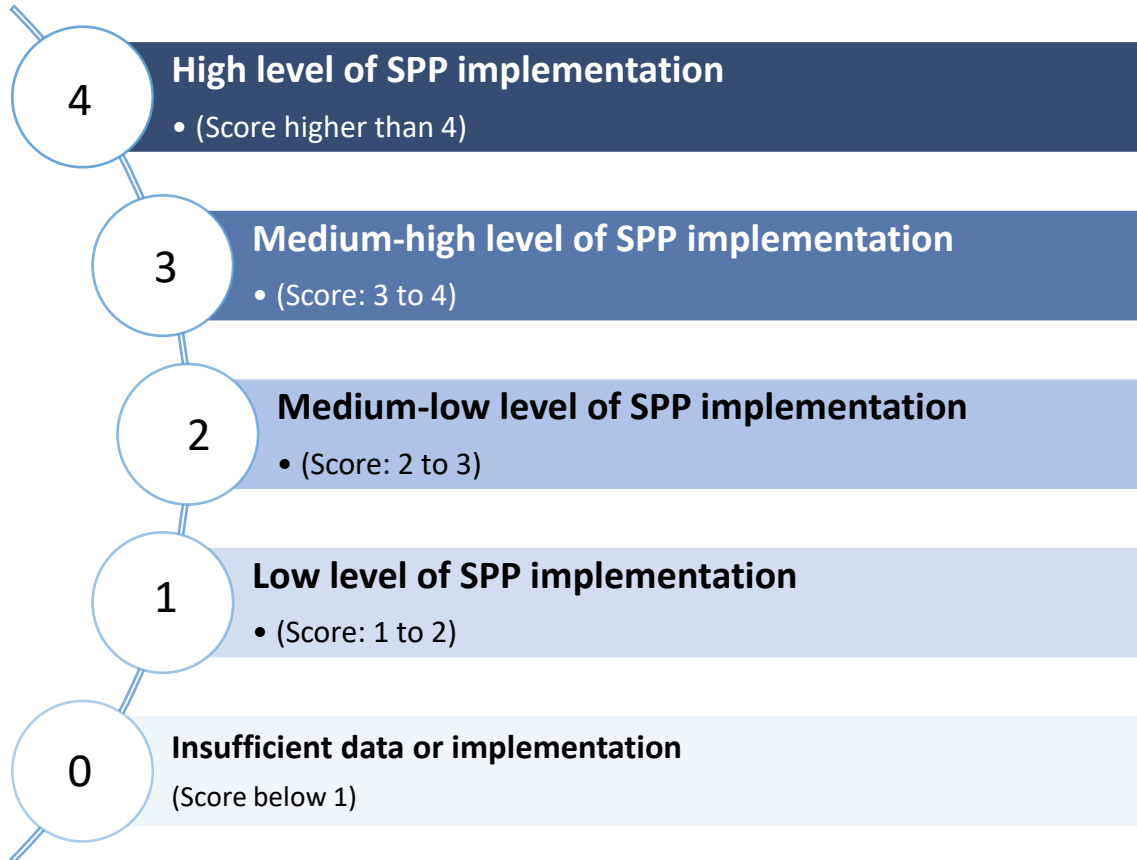

Where each letter represents the score obtained in each section of the evaluation system

- 1 point per section (for each sub-indicator A, B, C, D, E, F)
- Participation in the reporting is possible, even when not all sections are filled (except for A)

How is the level of SPP implementation assessed?

Maturity model based on calculated SPP Implementation score:

Tools and Guidance

Reporting tools and documents

- **An Excel®-based calculator/questionnaire with:**
 - Pre-set answers and automatic score calculation facilitating data collection.
 - (with however further evidence to be included)
- **PDF Reporting instructions**
- **Frequently Asked Questions**

Supporting documents

- Please note that governments have to **provide evidence** to support each claim (policy document, procurement guidelines inclusive of sustainability criteria, green contracts, monitoring reports, etc.).

Any questions?

- National or regional governments may contact our team any time at unep-spp@un.org for support and clarifications.

SDG 12.7.1. Reporting

Possible data sources

Data holders for Sustainable Public Procurement implementation are usually those entities in charge of its implementation:

- Ministry of Environment, or;
- Ministry of Finance/Treasury Board, or;
- Public Procurement Agency

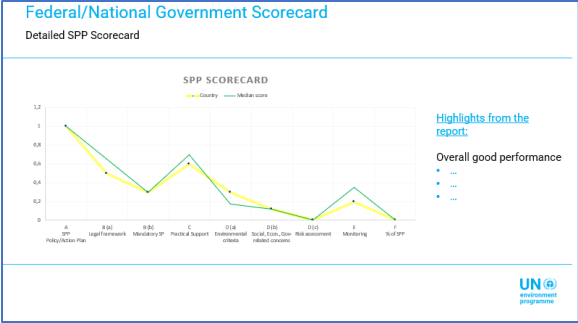

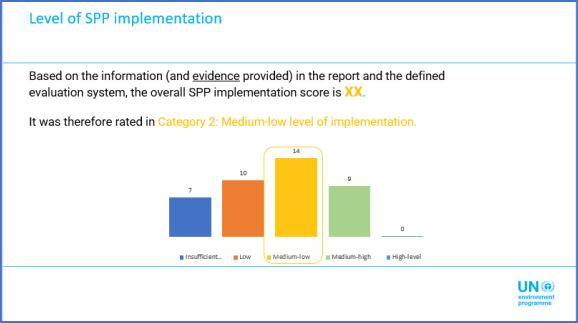

In a few cases, they may also be:

- External institutions mandated by the national government to support the development of greener products and services (e.g. environmental institutes)

SDG 12.7.1. Reporting

Why report on SDG Indicator 12.7.1?

- Participate in the global movement of the SDGs
- Set up a baseline to monitor your future progress
- Receive a personalised benchmark on the final evaluation

Federal/National Government Scorecard

Highlights from the report

| | Overall SPP Implementation Score | A SPP Policy / Action Plan | B (A) SPP Provisions | B (B) Mandatory / Voluntary SPP | B. Legal framework | C Practical Support | D SPP Criteria | D (A) Environmental criteria | D (B) Social, Econ. Gov-related concerns | D (C) Risk assessment | E Monitoring | F % of SPP |
|---------|----------------------------------|----------------------------|----------------------|---------------------------------|--------------------|---------------------|----------------|------------------------------|--|-----------------------|--------------|------------|
| Country | 3.24 | 1 | 0.5 | 0.3 | 0.8 | 0.4 | 0.04 | 0.3 | 0.12 | 0.2 | 0.2 | 0.1 |
| AF | 3.68 | 1 | 0.7 | 0.3 | 1 | 0.5 | 0.28 | 0.4 | 0.12 | 0.1 | 0.1 | 0.1 |
| Middle | 2.1 | 1 | 0.65 | 0.3 | 0.8 | 0.7 | 0.38 | 0.17 | 0.12 | 0 | 0.35 | 0 |
| Median | 2.28 | 0.98 | 0.58 | 0.18 | 0.75 | 0.59 | 0.36 | 0.19 | 0.13 | 0.04 | 0.43 | 0.02 |

2021 SDG Indicator 12.7.1. reporting timeline

(Provisional timeline)

2021 Data collection process

Calculator and instructions sent out to national focal points.

September-October 2021

Data Collection through government focal points in charge of SDG 12.7.1 reporting. Focal points coordinate the data collection process and work with other relevant institutions within government or at other administrative levels.

October-December 2021

National reports and evidence will be reviewed by UNEP

December-January 2022

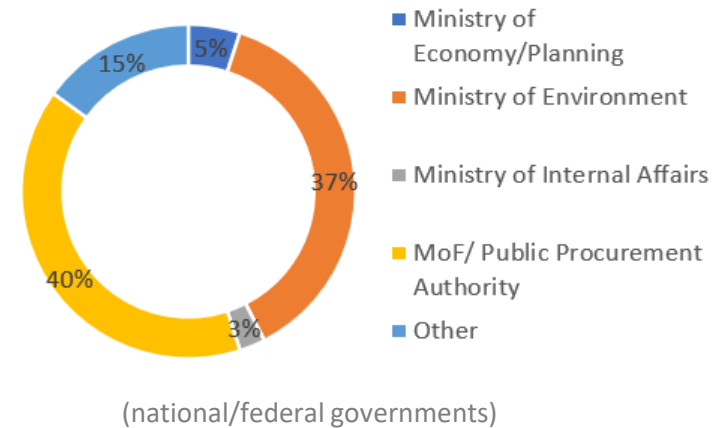

2020 SDG 12.7.1 Data collection Outcome

Results of 2020 reporting exercise on SDG Indicator 12.7.1

A total of 79 governments submitted reports in 2020 data collection exercise, which included:

- 40 national/federal governments
- 39 subnational governments

Distribution of reporting entities
