# Data Scientist: The Sexie of the 21st Century

by Thomas H. Davenport and D.J. Patil  
FROM THE OCTOBER 2012 ISSUE

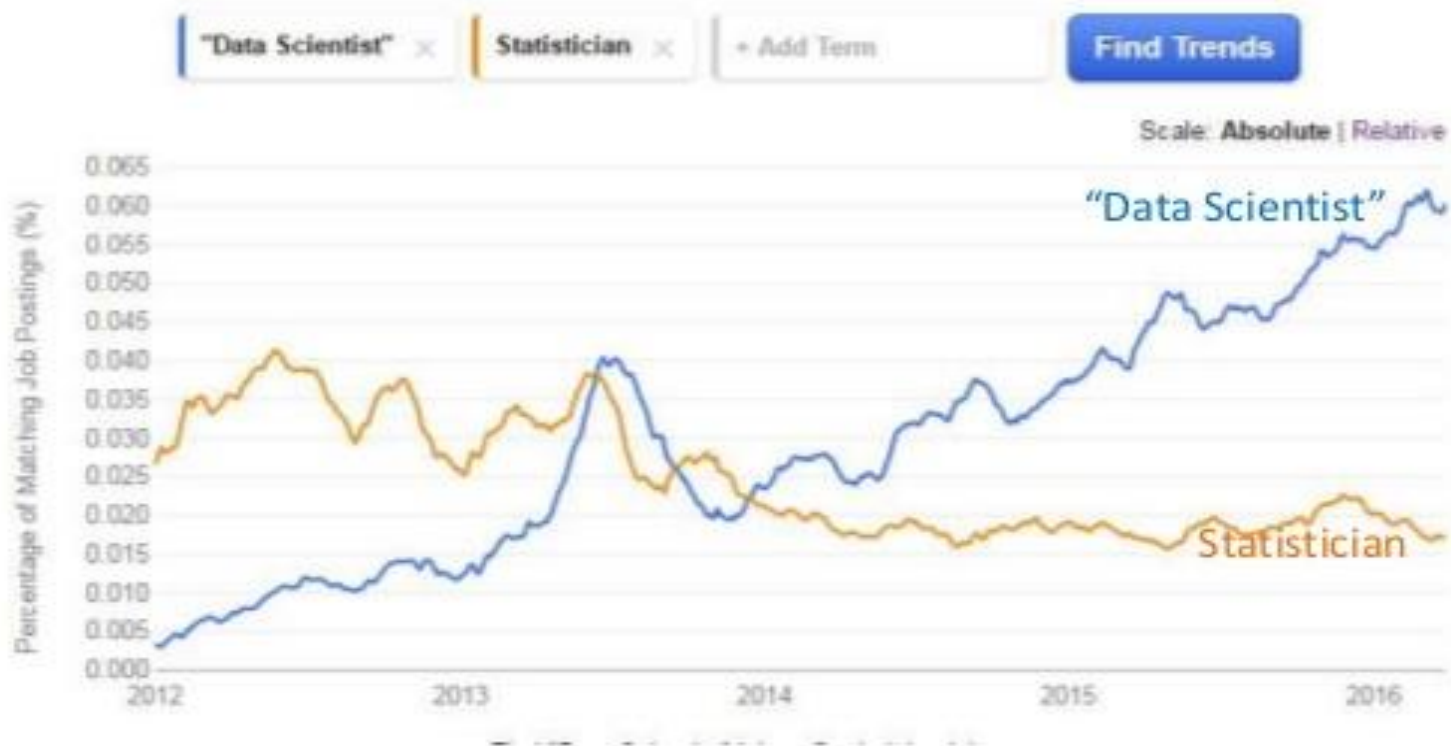

**W**hen Jonathan Goldman arrived for work in June 2006 at LinkedIn, the business networking site, the place still felt like a start-up. The company had just under 8 million accounts, and the number was growing quickly as existing members invited their friends.

"I KEEP SAYING THAT THE SEXY JOB IN THE NEXT 10 YEARS WILL BE STATISTICIANS, AND I'M NOT KIDDING."  
— HAL VARIAN, CHIEF ECONOMIST AT GOOGLE

## Concluding Statement

Ramallah – October 20<sup>th</sup>, 2019

**Realizing** that the organization of the Data Science Festival comes in celebration of the World Statistics Day on October 20th of this year, and given the role of the government and all sectors in promoting and providing the required support for creative initiatives, including the Data Science Initiative, to improve decision-making at all levels, and

**Realizing** the importance of partnerships and exchange of experiences in the use of data science and the extent of its contribution to serve humanity and the measurement of Sustainable Development Goals, and

**In alignment** with the *National Policy Agenda* and *directions* of the Palestinian Government, that dedicates great priority to youth and entrepreneurship,

**We**, the participants of the first Data Science Festival in Palestine representing Ministries, Academic Institutions, and Research Centers, representatives of Civil Society Organizations, the Private Sector, and all attendees interested in the field of data science welcome this initiative and this global event, and

**We emphasize** the importance of data in human life, including the provision of data on all aspects of life, and the need to make data available for public use while ensuring data confidentiality and privacy of individuals, and

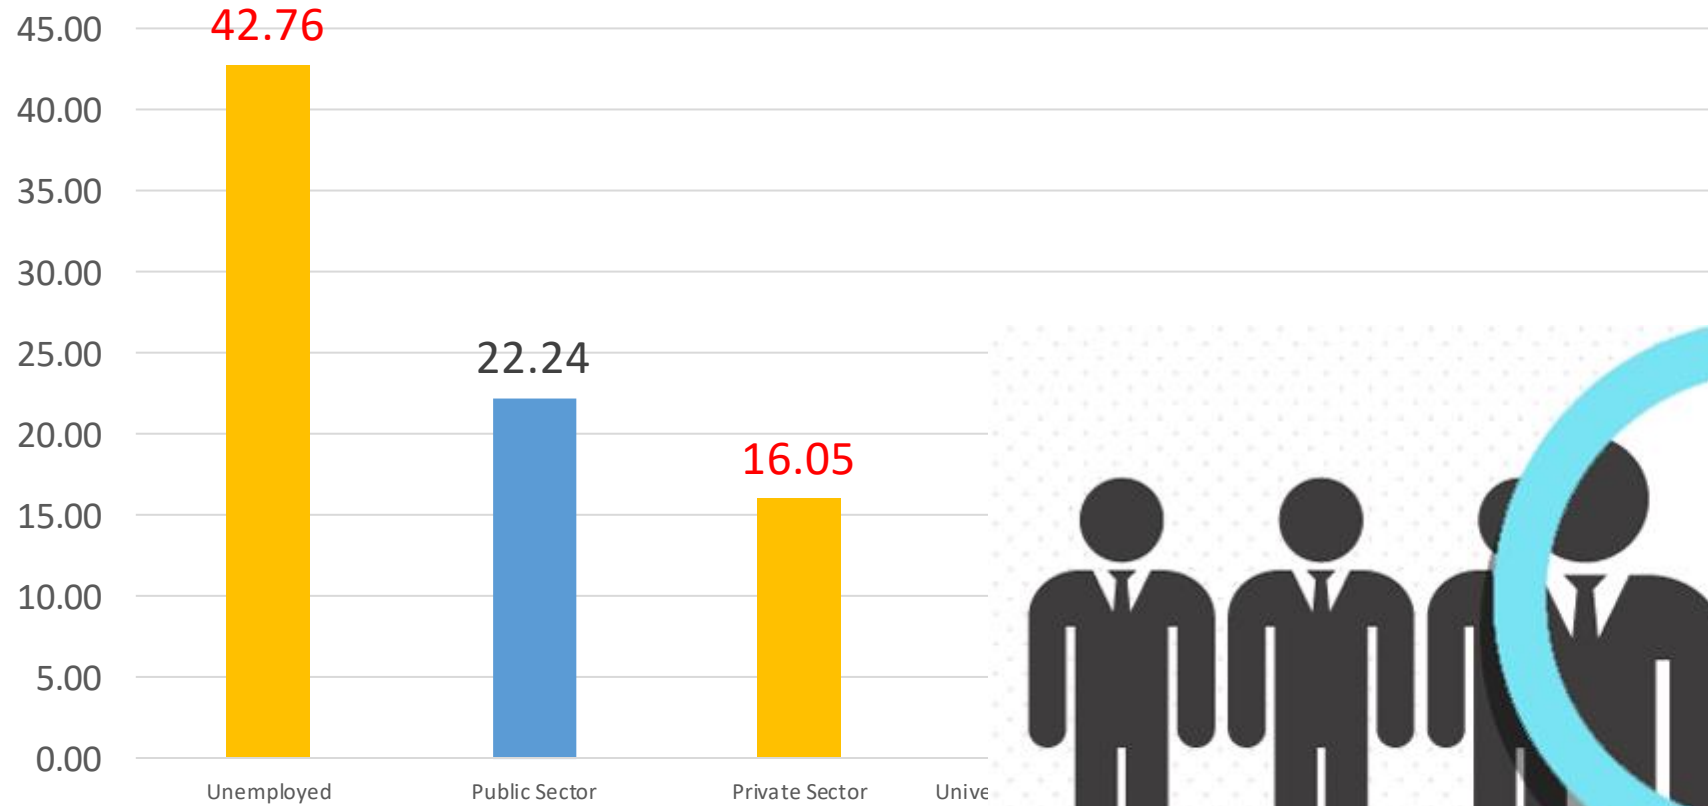

**We emphasize** the role of the Data Science Initiative including all of its projects in contributing to the enhancement of the status of Palestine in employing the information revolution and big data to overcome all challenges and achieve sustainable social development in several aspects to serve public good, and

**We call** for a full partnership between all national institutions from the private and sectors in addition to the components of the National Statistical System to provide

1. *Considering* data science as a broad world covering all business domains and encourage everyone from all specializations to acquire its knowledge;
2. *Encouraging* the government and the actors in the private and civil sectors to adopt the Data Science Initiative in Palestine as a basic lifeline and a pioneering step to serve the society; especially, the Palestinian youth;
3. *Strengthening* the partnership opportunities and invite all relevant institutions from different sectors to join the Data Science Initiative to promote different data sources, including administrative records;
4. *Establishing* of the Palestinian Society for Data Science as the incubator for corresponding standards, best practices and professional ethics and encouraging Palestinian competencies in the homeland and the Diaspora to join this society;
5. *Promoting* a culture of evidence based decision-making by building on what data science can offer in terms of knowledge and insights and overcome business constraints using best methodologies;
6. *Embedding* data science skills in the curricula of schools and universities in order to equip students with data intuition and motivation to engage in data science;
7. *Adopting* capacity development programs in the skills of data science for employees and executives by different institutions in all sectors according to their business domains and needs;
8. *Linking* this initiative at various national levels to international efforts on the basis of accumulating, updating and building on global knowledge;
9. *Strengthening* networking with Palestinian experts in data science field in all their locations to furnish Palestinian youth in all sectors of society with international expertise in this field;
10. *Supporting* the Data Science Initiative by all sectors of society to implement its various core projects, including the following:
  - Data Matters Festival.
  - Think Data Science Program.
  - Data Science for Executives & Leaders.
  - Data Science for Schools: "Schools without Walls".
  - Data Science Society of Palestine.

CRASH COURSE

DATA MATTERS @ PS

## Data science: R basics

Build a foundation in R and visualize data.

## Data science: Data visualization

Learn basic data visualization techniques.

## Data science: Probability

Learn probability theory using a case study on the

## Data science: Inference and modeling

Learn inference and modeling using statistical tools in data science

## Data science: Productivity

Use Unix/Linux to manage files, control, manage a repository

## Data science: Wrangling

Learn to process and convert raw data into formats needed for analysis.

### Component One. Basics of data science

Module 1. Data, information, knowledge, indicators, Metadata, official statistics, statistical terminologies, classifications, statistical ethics

Module 2. Statistical methodologies, sampling techniques,

Module 3. Quality of data, sampling errors, non-sampling errors

### Component Two: Data science programming languages

Module 1: Introduction to R

Module 2: Introduction to Python

### Component Three: Data Science and visualization

Module 1. Data storytelling

Module 2. Data presentation

Module 3. Data visualization

### Component Four: Catalogue of data

Module 1. Data available at PCBS

Module 2. Other data sources

### III. Organizational and institutional structure

(a) Does your organization have internal technical capabilities, human resources related to digital transformation?	<ol style="list-style-type: none"><li>(1) There are data managers as needed to handle the available data.</li><li>(2) Data scientists are recruited and trained to undertake holistic tasks using available data.</li><li>(3) A multidisciplinary data science team is available with statisticians and technologists, with initiatives in learning and applications across the enterprise.</li></ol>
(b) In your organization, what are the current administrative systems and organizational structures that handle data?	<ol style="list-style-type: none"><li>(1) Forming ad hoc committees to deal with the data challenges presented.</li><li>(2) Seeking assistance from other similar teams as needed.</li><li>(3) There is a unit dedicated to data science management in the institution.</li></ol>
(c) In your organization, where exactly is big data used?	<ol style="list-style-type: none"><li>(1) Raising awareness of facts related to institutional work.</li><li>(2) Services and products for marketing the organization.</li><li>(3) Throughout the business cycle: Using big data in planning, and operations.</li></ol>

### IV. Literacy and training

(a) Does your institution have awareness-raising programmes and activities on the benefits of big data?	<ol style="list-style-type: none"><li>(1) Educating employees in the field of information technology.</li><li>(2) Awareness for all with training of IT personnel.</li><li>(3) Awareness of leaders and administrators and providing employees with appropriate training according to their backgrounds.</li></ol>
(b) If your institution is in the field of education, are there academic programs	<ol style="list-style-type: none"><li>(1) Big Data course is optional for specific majors.</li><li>(2) Big Data course is mandatory for all university departments.</li></ol>
