

الإستثمارات فى الذكاء الإصطناعى والتكنولوجيات الرائدة

أ.د. عبد الهادى بشير قشيوط

E-mail: akashyout@srtacity.sci.eg, hady8@yahoo.com

المدير التنفيذى لمركز تميز الدراسات المتقدمة والمستقبلية
مدينة الأبحاث العلمية والتطبيقات التكنولوجية - جمهورية مصر العربية

ندوة حول:

الذكاء الاصطناعى والإستشراف التكنولوجى العربى فى ضوء الثورة الصناعية الرابعة

بيروت - الجمهورية اللبنانية 1 - 2 / 7 / 2019

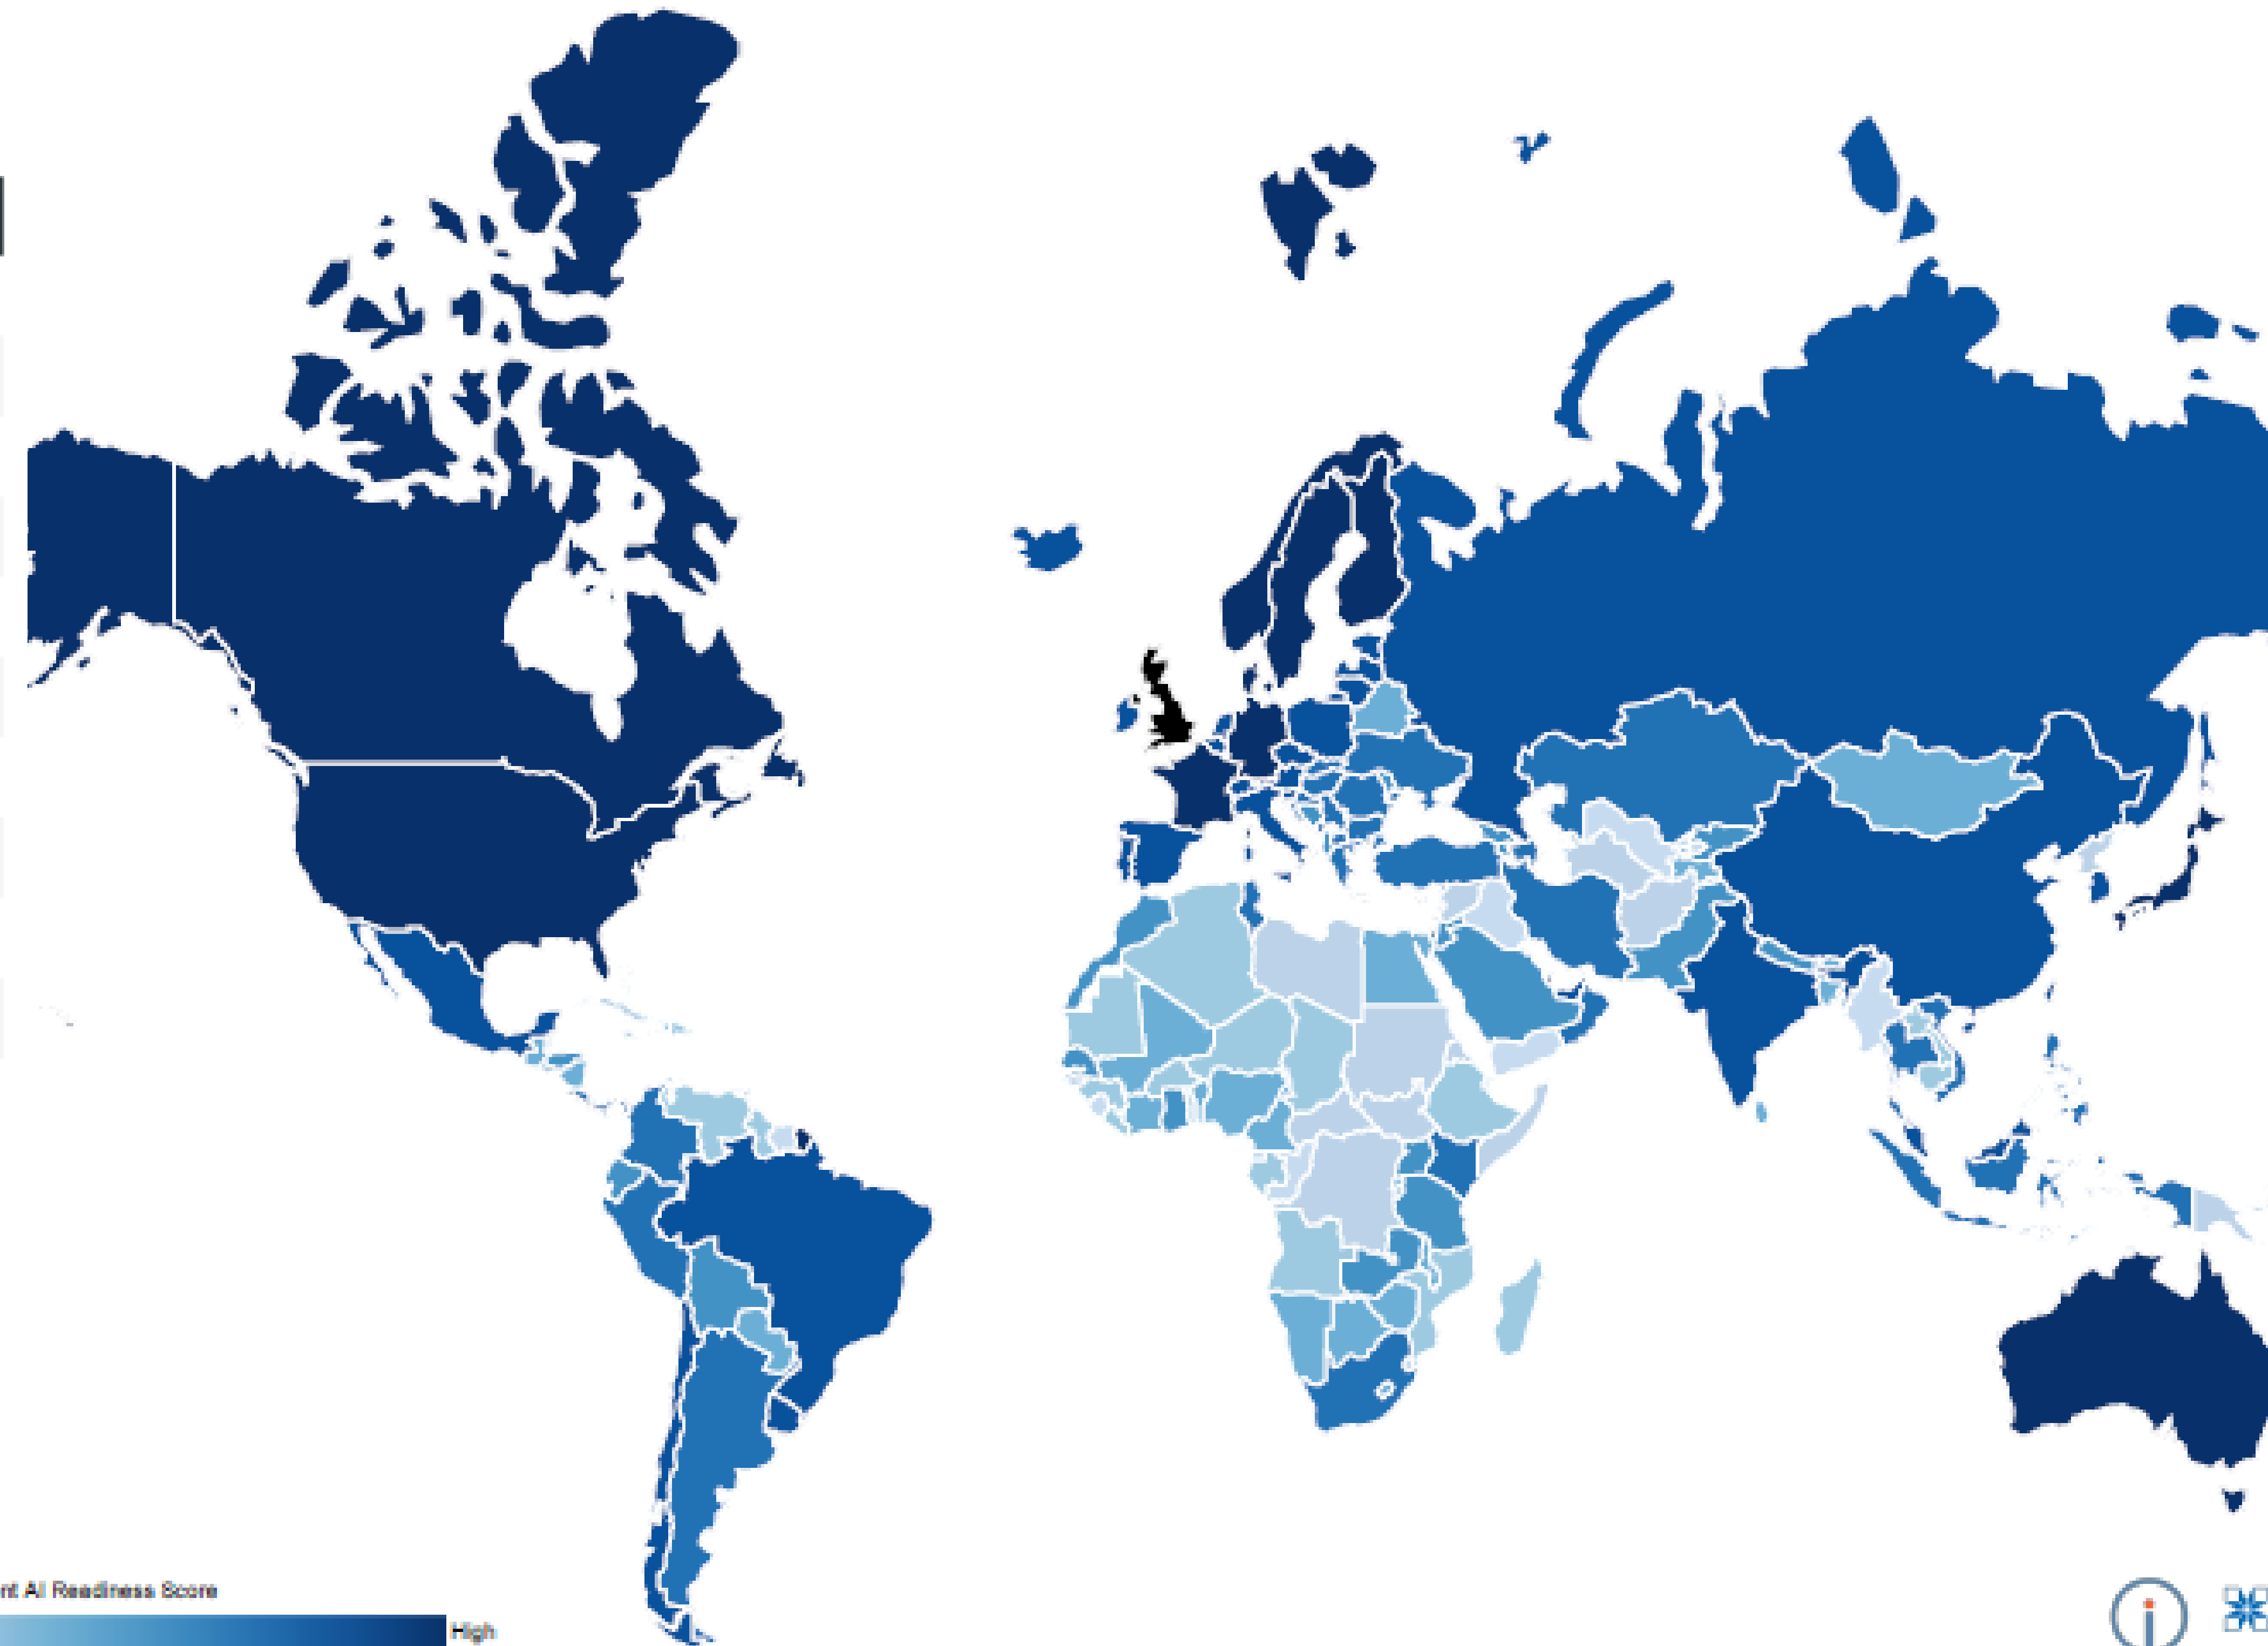

الأجندة

1. المؤشر الحكومي لجاهزية تطبيقات الذكاء الاصطناعي
2. الرؤية المستقبلية لحجم الأعمال لتطبيقات الذكاء الاصطناعي
3. تطوير أدوات الإستثمار ونمو الشركات البادئة
4. قصص نجاح من الواقع العالمي والعربي
5. الخلاصة والتوصيات

Government Artificial Intelligence Readiness Index 2019

TOP 10 RANKINGS FOR GOVERNMENT AI READINESS
2018/19

Rank	Country	Score
1	Singapore	9.186
2	United Kingdom	9.069
3	Germany	8.810
4	United States of America	8.804
5	Finland	8.772
6	Sweden	8.674
6	Canada	8.674
8	France	8.608
9	Denmark	8.601
10	Japan	8.582
19	UAE	7.445
42	Qatar	6.035
54	Tunisia	5.652
59	Oman	5.321
74	Jordan	4.927
78	Saudi Arabia	4.779
79	Kuwait	4.725
80	Morocco	4.717
100	Bahrain	3.962
111	Egypt	3.492
112	Lebanon	3.487

Government Artificial Intelligence Readiness Index 2019

- Artificial intelligence (AI) technologies are forecast to add US\$15 trillion to the global economy by 2030.
- According to the findings of the Index and as might be expected, the governments of countries in the Global North are better placed to take advantage of these gains than those in the Global South.
- There is a risk, therefore, that countries in the Global South could be left behind by the so-called fourth industrial revolution. Not only will they not reap the potential benefits of AI, but there is also the danger that unequal implementation widens global inequalities.

Government Artificial Intelligence Readiness Index 2019

- AI has the power to transform the way that governments around the world deliver public services. In turn, this could greatly improve citizens' experiences of government.
- Governments are already implementing AI in their operations and service delivery, to improve efficiency, save time and money, and deliver better quality public services.
- The overall score is comprised of 11 input metrics, grouped under four high-level clusters: **governance**; **infrastructure and data**; **skills and education**; and **government and public services**. The data is derived from a variety of resources in databases such as the **number of registered AI startups on Crunchbase**, to indices such as the **UN eGovernment Development Index**.

Government Artificial Intelligence Readiness Index 2019

Governance

- Data protection/privacy laws—**yes/no**
- National AI strategy—yes/no/pending

Infrastructure and Data

- Data availability
- Government procurement of advanced technology products
- Data/AI capability (in government)

Skills and Education

- Technology skills
- Private sector innovation capability
- Number of AI startups

Government and Public Services

- Digital public services
- Effectiveness of government
- Importance of IT to government's vision of the future

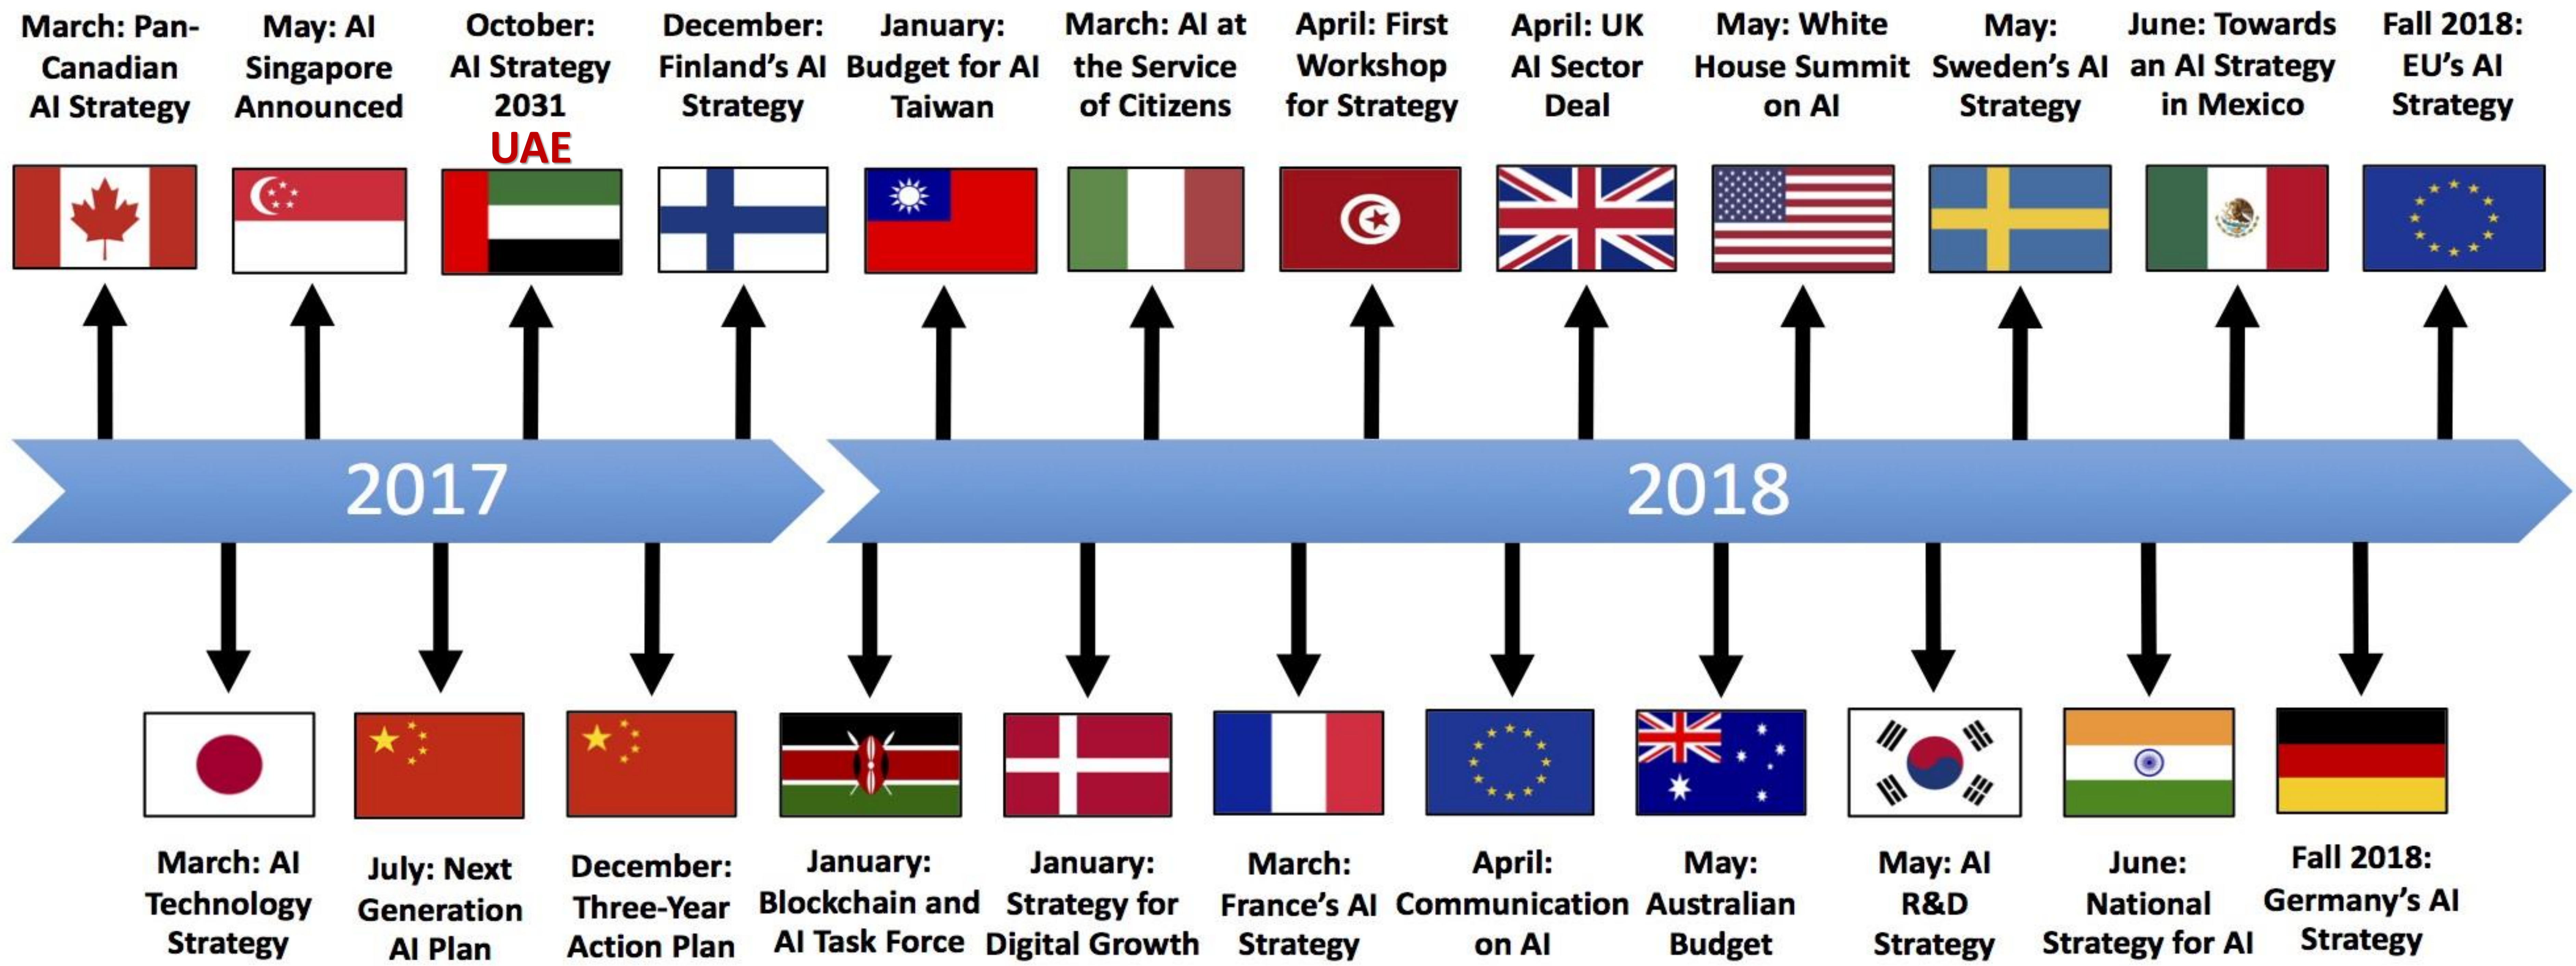

Government Artificial Intelligence Readiness Index 2019

INDICATOR	SOURCE	WHAT SOURCE SHOWS
National AI strategy—yes/no/pending	Desk research, consulting: Gartner paper , Medium article , Nesta article	Existence (or otherwise) of a comprehensive national AI strategy which shows a concerted policy effort by a national government to make the most of AI, and mitigate the associated challenges
Technology skills	Sub-indicator in WEF Global Competitiveness Report 2018	Score out of seven for perceptions of the extent of digital skills among the active population from the WEF Executive Opinion Survey. This measure is included as a proxy of AI skills in the general population, which is important both as an indication of skills in the public sector, and the available pool of local talent

Government Artificial Intelligence Readiness Index 2019

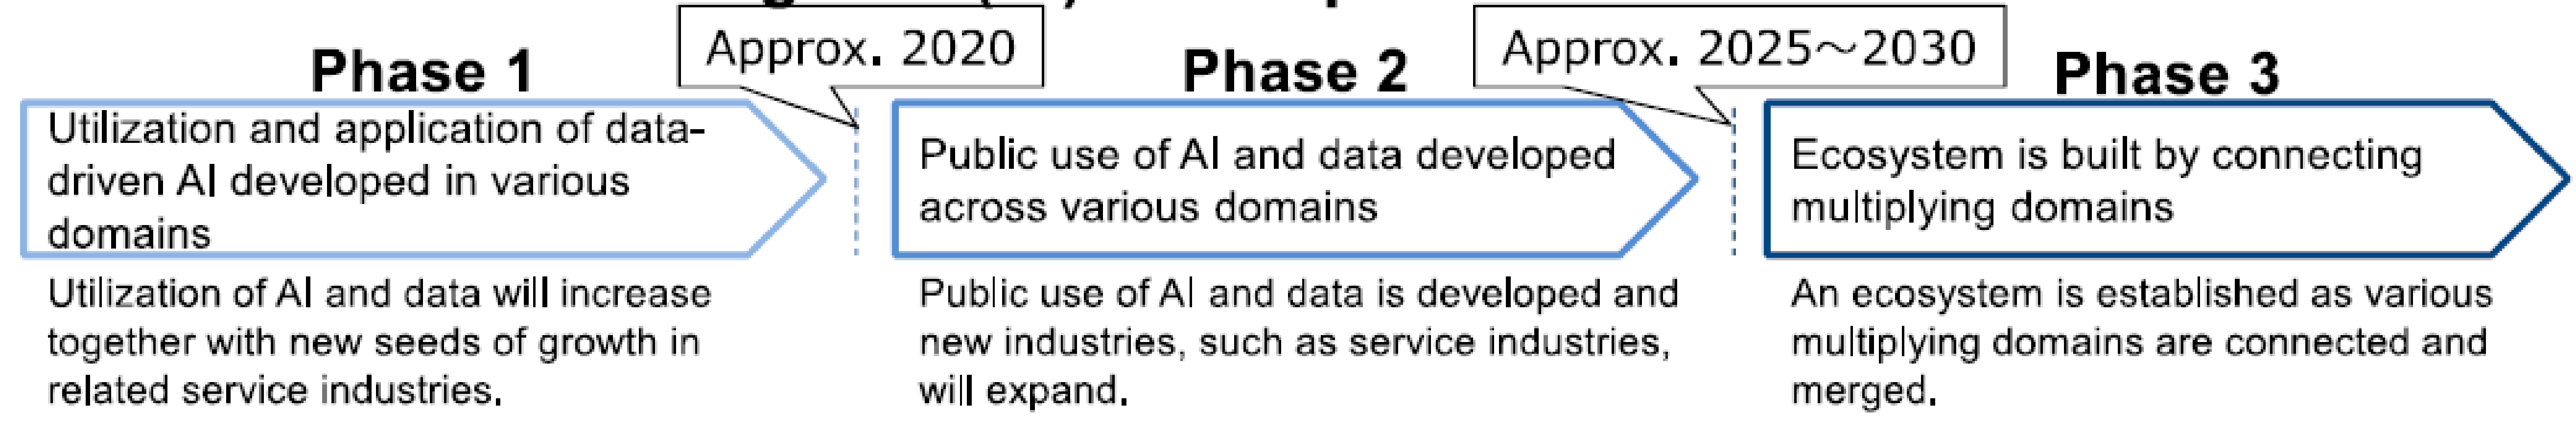

INDICATOR	SOURCE	WHAT SOURCE SHOWS
Private sector innovation capability	Pillar in WEF Global Competitiveness Report 2018	Combined measure of: diversity of workforce, state of cluster development, international co-inventions, multi-stakeholder collaboration, scientific publications, patent applications, R&D expenditures, research institutions prominence, buyer sophistication, and trademark applications. This is a measure of private sector innovation capability, which is a proxy for how ready the private sector is to develop the AI tools needed by government
Number of AI startups	Crunchbase	Number of AI startups per country as registered on Crunchbase , as a proxy for the size of a country's AI sector. Similarly to the previous indicator, this is included to measure how ready the private sector is to develop AI tools and solutions for government

Artificial Intelligence Strategies

Artificial Intelligent Strategy in Japan 2017

(1-1) Artificial Intelligence (AI) Development Phases

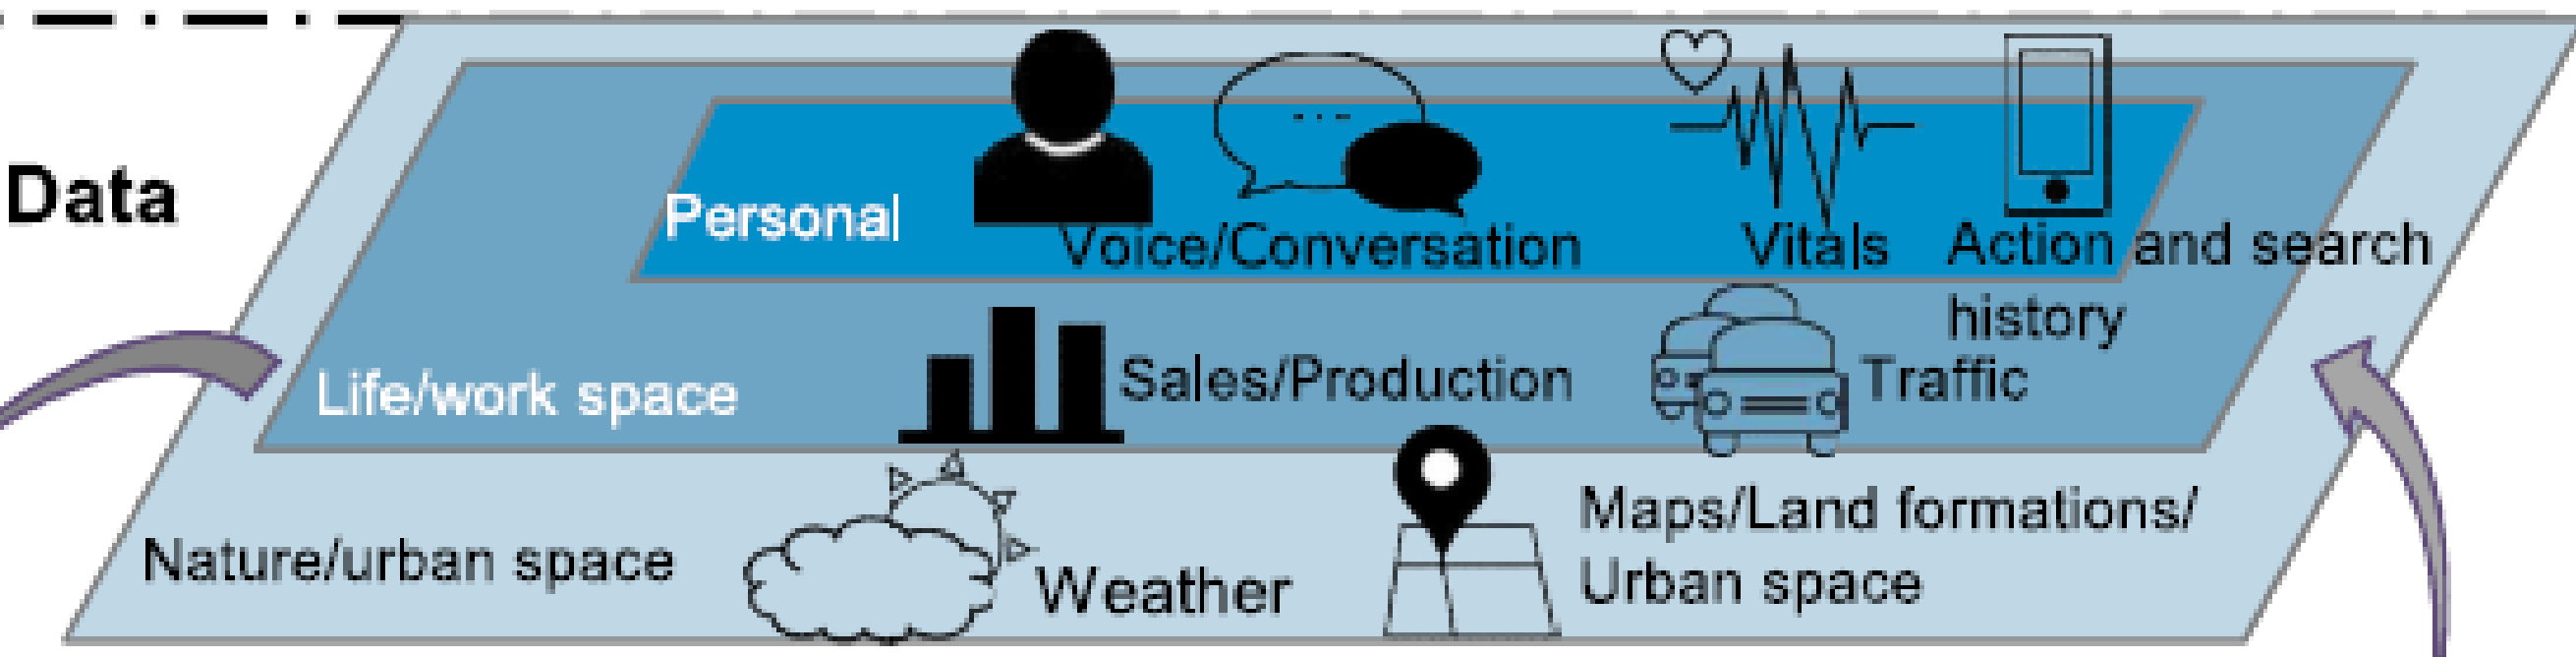

* The duration of each phase is not indicated because the current situation and future development differs depending on the field.

- Image recognition
- Natural language processing
- Voice recognition/synthesis
- Prediction

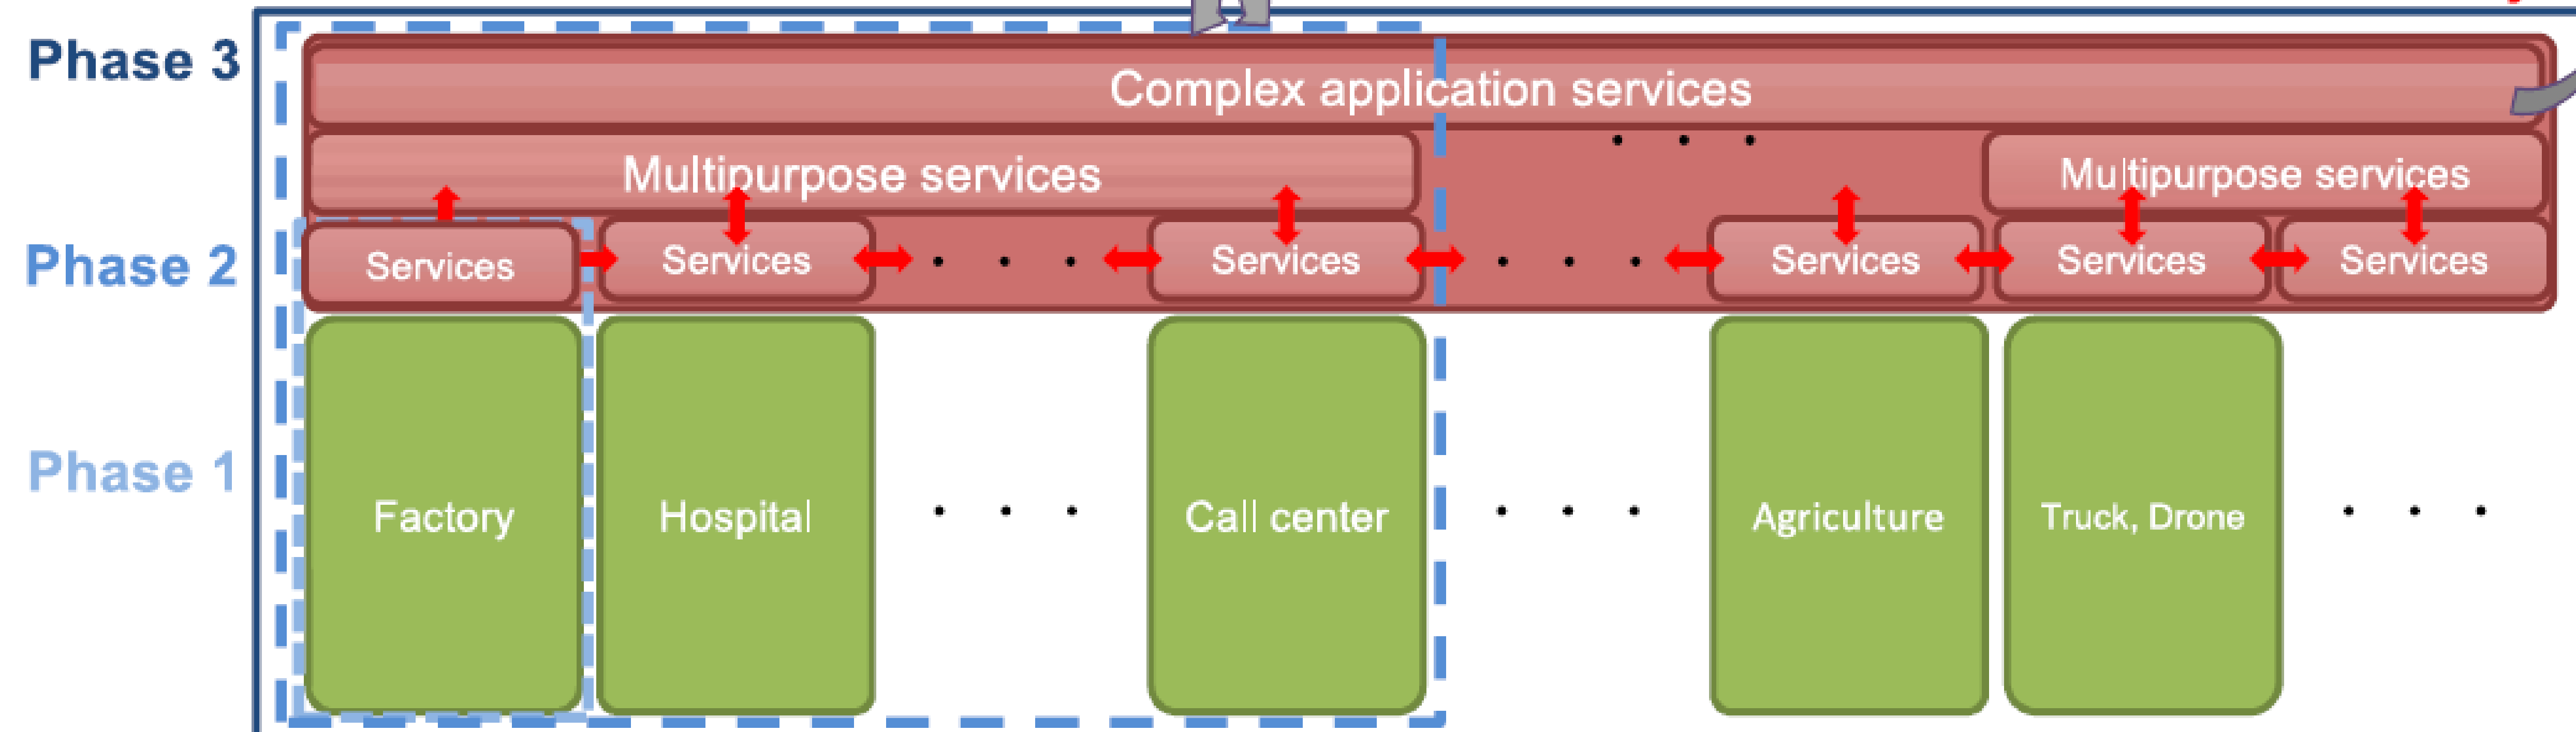

AI technology

Data

New value creation · Supply (Virtuous cycle)

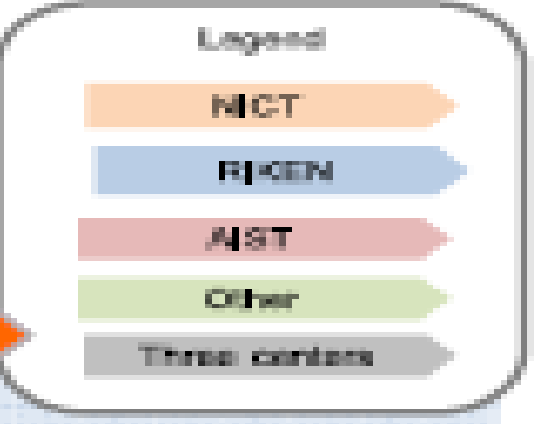

Artificial intelligence as a service (AlaaS)

Note: The concept of AlaaS is borderless and developed across fields.

Image of Research Objectives Based on Collaboration Among the 3 Centers [Attachment 2]

* Research issues, used data, and so on will be continuously examined in the future
 * Establishment of project leader for each issue will be examined in the future

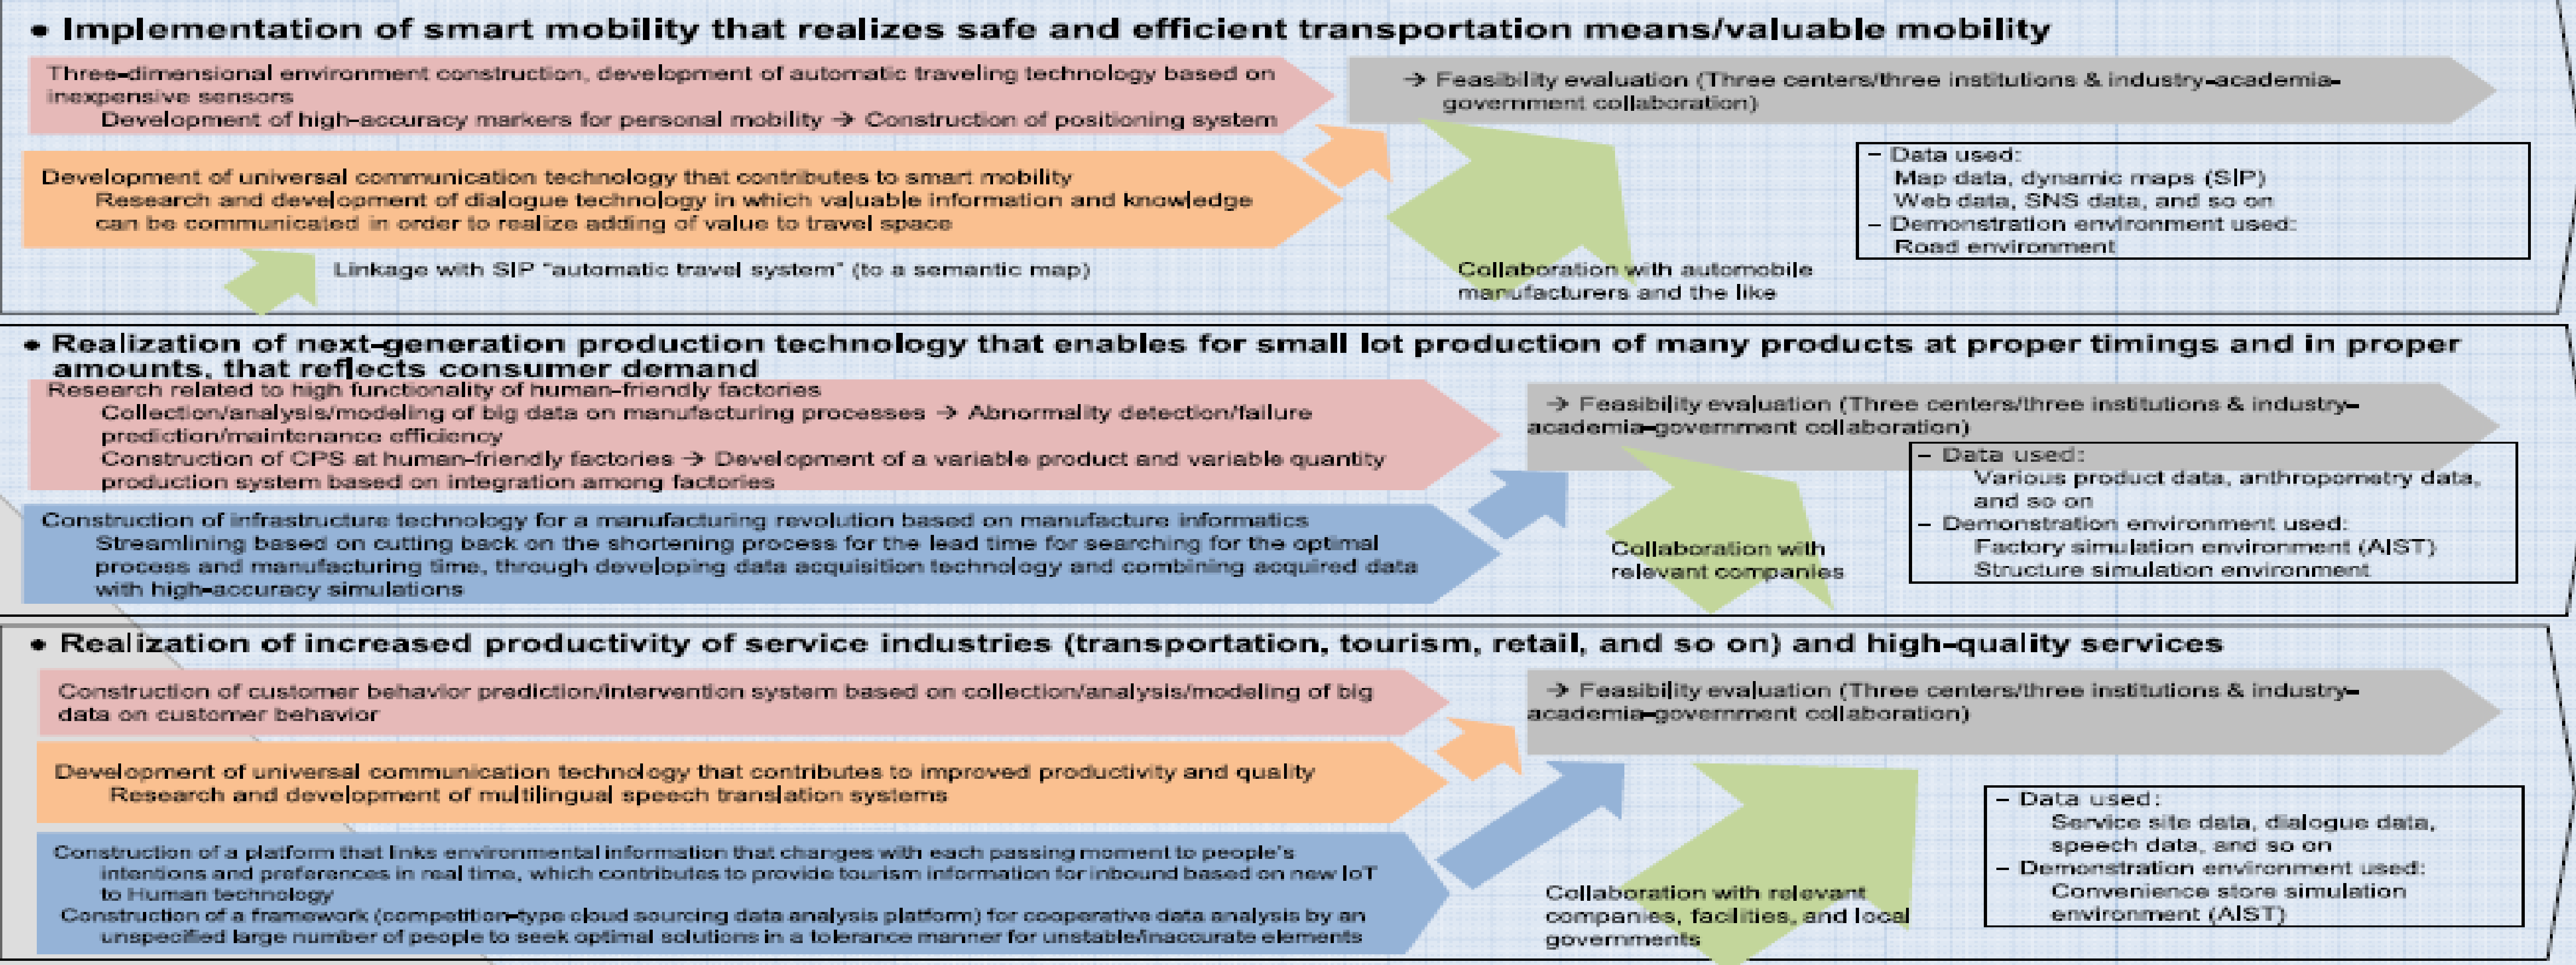

FY2016 FY2017 FY2018 FY2019 FY2020 and onwards

Implementation of research and development based on open innovation (towards coordination among three centers/ three institutions & industry-academia-government collaboration)

Image of Planning of Joint Projects by the 3 Centers

Image of linkage of data platforms of three centers

- Data infrastructure development
- Skilled engineer data
Life phenomenon data
Geospatial data
- Language processing data
Brain activity data
AI security infrastructure data
Remote sensing data and so on
- Health/medical data
(FY2017 data platform business)
- Common platform development
- Advanced module development
- AI middleware development
- General-purpose infrastructure technology development
(Theoretical study/algorithm development)

- ### Infrastructure Technology Sectors That Support the Above
- AI security technology (secret technology/secret search technology/privacy protection technology, strengthening of cyber security, and so on)
 - Large-scale AI development environment (middleware for applying advanced machine learning techniques such as deep learning to big data in a prompt manner with low delays, parallel computation, cluster construction technology, and so on)
 - Research and development of schemes and the like for acquiring necessary data (annotation technology, applicability of AI to meta technology for data (semantic technology), noise cancelation technology for cleansing, and so on)
 - Research and development of next-generation AI architecture (neuromorphic architecture, neuromorphic devices, and so on)
 - General-purpose questions and answers/dialogues, research and development of general-purpose technology related to multilingual speech recognition/automatic translation/speech synthesis
 - Research and development of brain information communication technology
 - Acceleration of science and technology research (analysis of literature on science and technology, construction of a knowledge base, optimization of experimental designs, hypothesis generation/verification)
 - Development of general-purpose infrastructure technology (incomplete information learning, optimization, causal inference, deep learning, search, mathematical science, and so on)
 - Research of artificial intelligence related to humanities and social sciences (social impacts, legislation, social systems, ethics, privacy, and so on)

Further Advancement of Collaboration Among the 3 Centers

- > Data sharing (Example: To avoid Copyright Act related problems, such as not being able to share Web data and the like, in other words, researchers who don't have the right to use Web data have to virtually share the data through concurrent posts, cross-appointments, and so on with the institution that own the data)
- > Sharing of computer resources, middleware, and so on (Example: Joint use of AI bridge cloud infrastructure (ABCI: AIST)), sharing of tacit knowledge and know-how for data creation

Table 1. Forecast of Global AI-Derived Business Value (Billions of U.S. Dollars)

	2017	2018	2019	2020	2021	2022
Business Value	692	1,175	1,901	2,649	3,346	3,923
Growth (%)		70	62	39	26	17

Source: Gartner (April 2018)

- AI and machine learning have the potential to create an additional \$2.6T in value by 2020 in Marketing and Sales, and up to \$2T in manufacturing and supply chain planning.
- Gartner predicts the business value created by AI will reach \$3.9T in 2022.

Artificial Intelligence Revenue by Region, World Markets: 2015-2024

The number of American lives AI-powered autonomous vehicles could save on the road per decade.

COMPANIES & COUNTRIES WINNING THE AI RACE

TOP 10 COMPANIES

- 1 DEEPMIND** #1 right now, in terms of AI research.
- 2 GOOGLE** Google Brain teams focus on long-term AI research in every imaginable subfield.
- 3 FACEBOOK** Their focus is language-domain problems like question answering and dynamic memory.
- 4 OPENAI** They have a small all-star team of AI experts.
- 5 BAIDU** The strongest player in AI in China.
- 6 MICROSOFT** Years of experience in the field, late adopters of deep learning now focusing on real-time translation through Skype.
- 7 APPLE** They're developing facial recognition technology that focuses on customers' reactions to ads, as well as improving Siri.
- 8 IBM** The IT giant aims to use AI to extract meaning from photos, videos, text, and speech.
- 9 AMAZON** Most areas within Amazon's business will lean on AI in some form, as a part of Alexa, their checkout-less store in Seattle, or automated drone deliveries.
- 10 NVIDIA** Nvidia and Nuance announced a partnership aiming to bring AI into healthcare.

TOP 10 COUNTRIES

THE FUTURE OF AI

AUTOMATED TRANSPORTATION

The goal is for all transportation to become automated in the future.

CYBORG TECHNOLOGY

AI and robotics will help us overcome our cognitive and physical limitations, including robotic limbs capable of communicating with our brains.

TAKING OVER DANGEROUS JOBS

Robots and drones will take over hazardous jobs, like bomb defusing, eliminating the need of people to risk their lives in extreme conditions.

SOLVING CLIMATE CHANGE

Using big data, AI could one day identify trends and use that information to present solutions to the world's biggest problems like climate change.

ROBOTS AS COMPANIONS

Japan has made the first big steps toward robotic pets and humanoids that can understand and feel emotions.

EXPLORING NEW FRONTIERS

Robotics will also help us explore new frontiers such as unexplored oceans and space.

PREDICTING THE FUTURE

Machine learning uses the past to make predictions about the future. It will be able to predict things as intimate as who will start dating or who will get divorced.

A. The race for leadership

Global distribution of AI startups

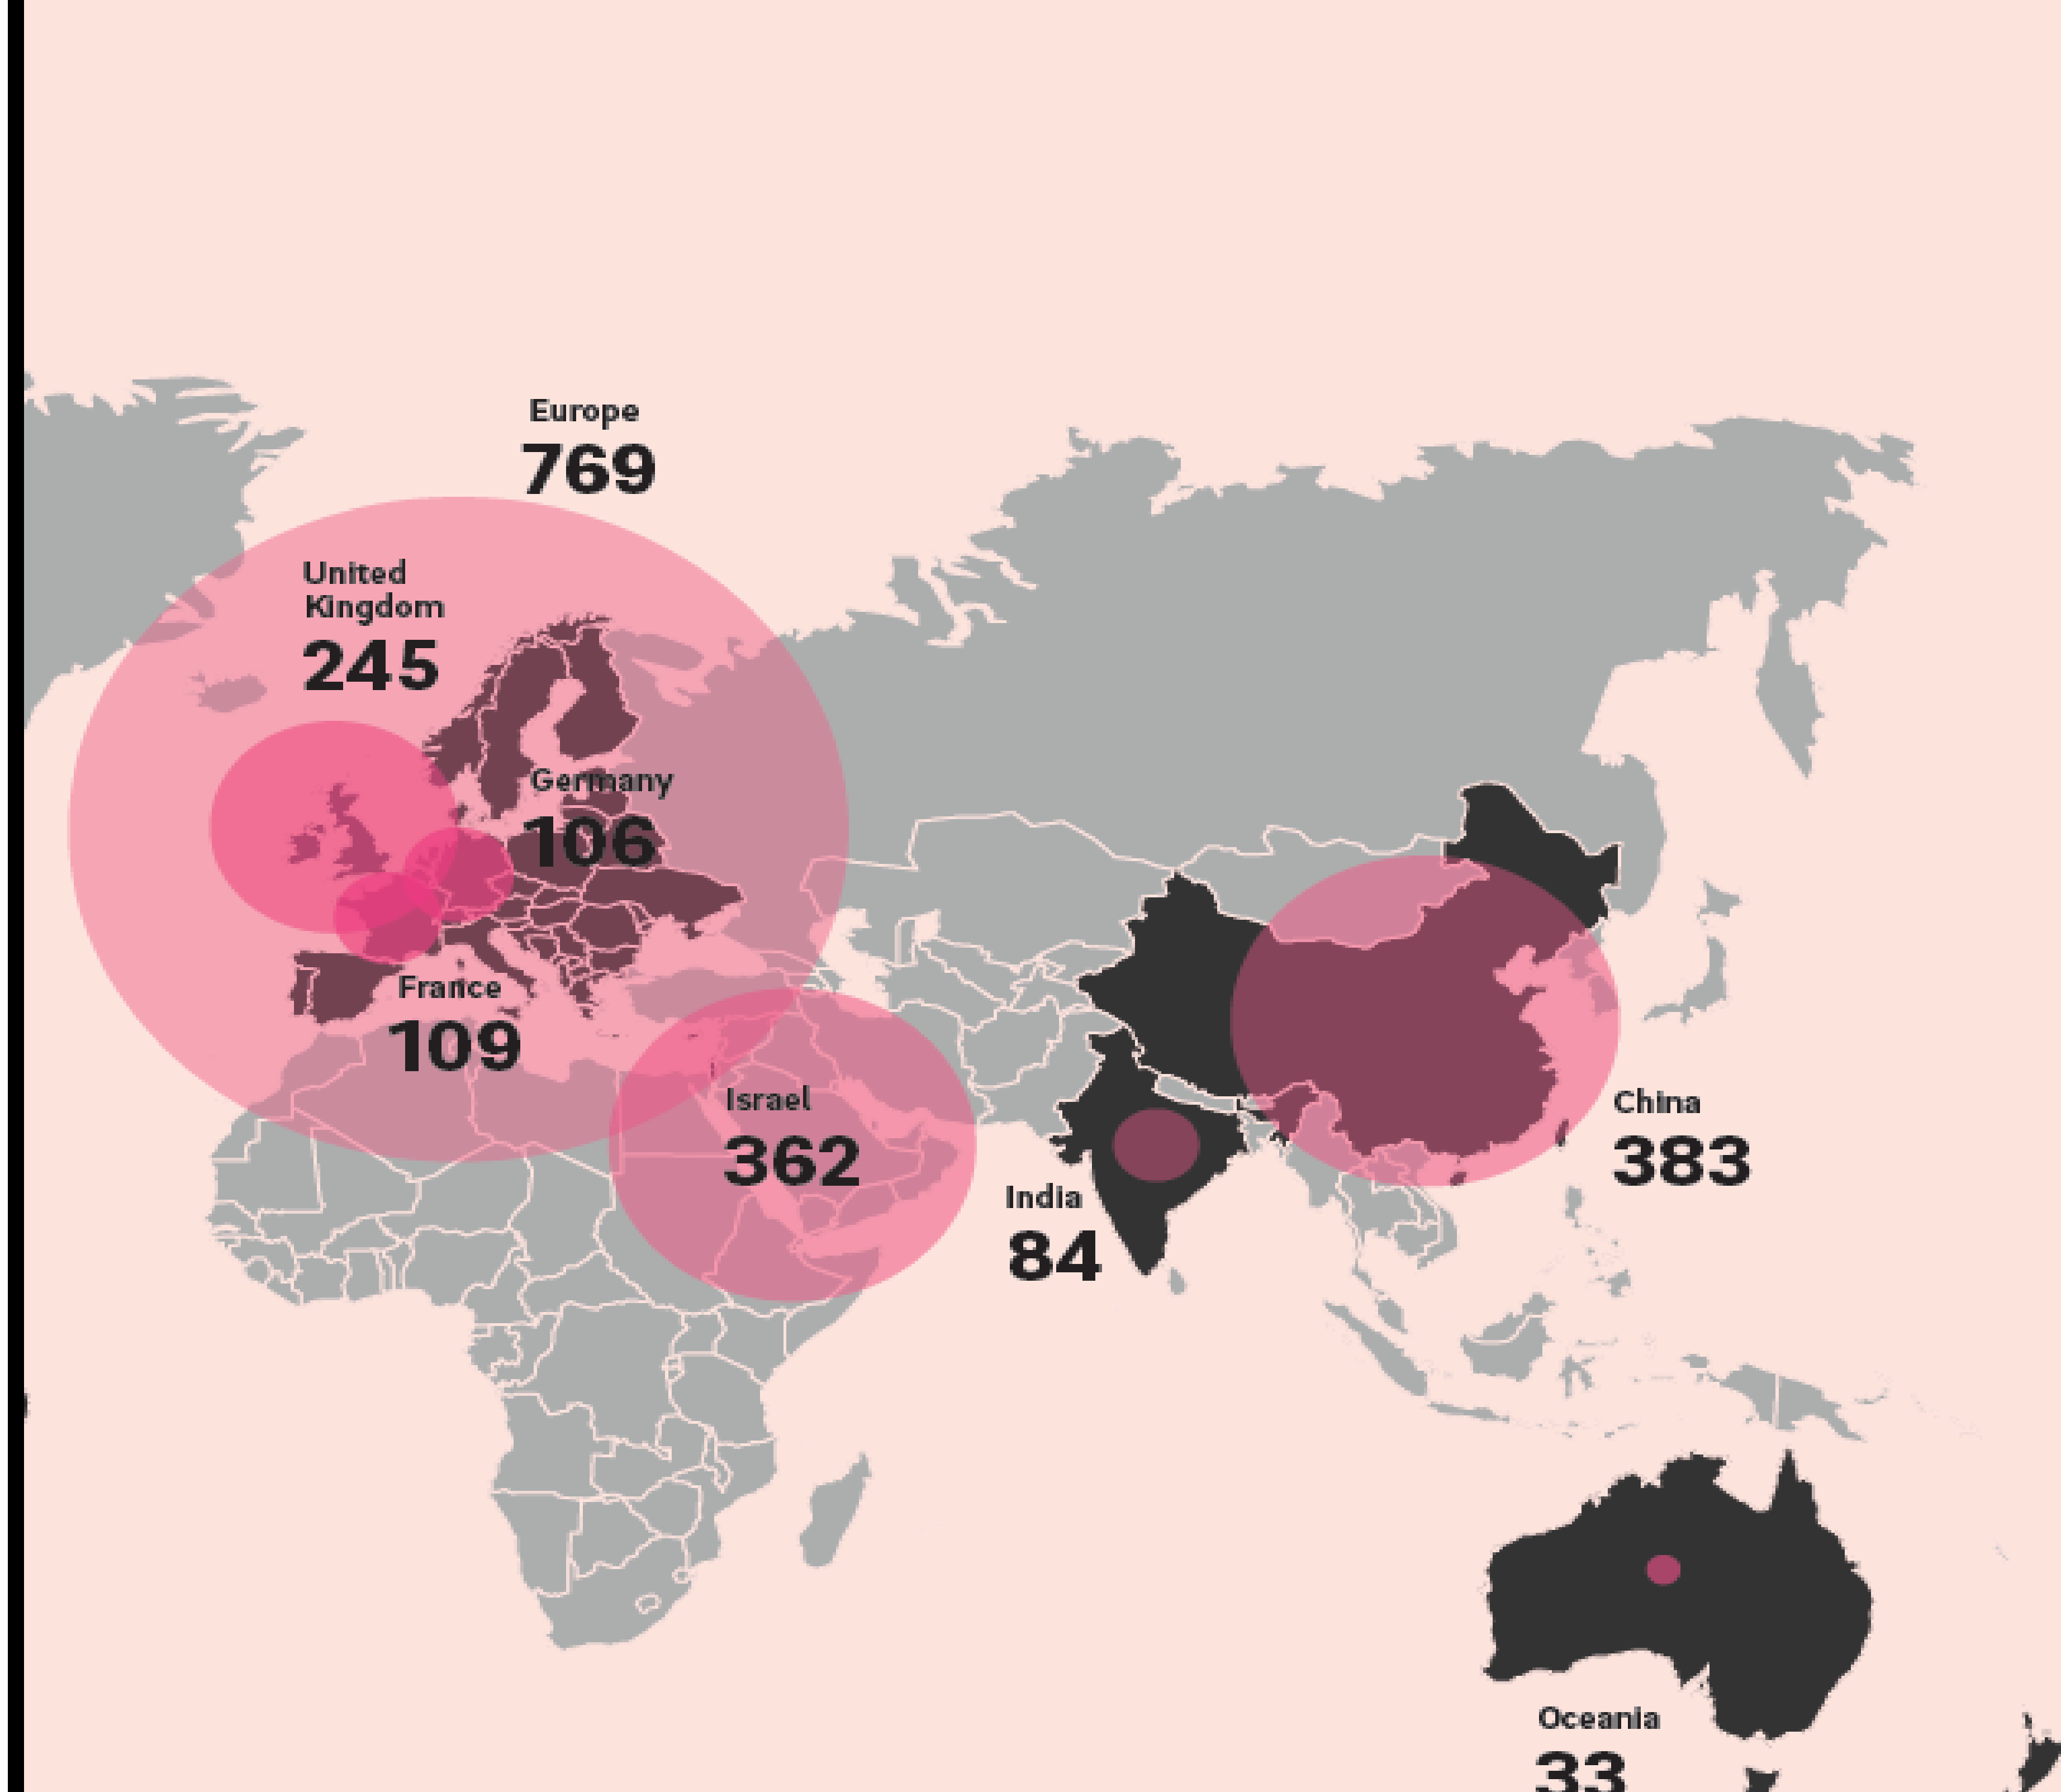

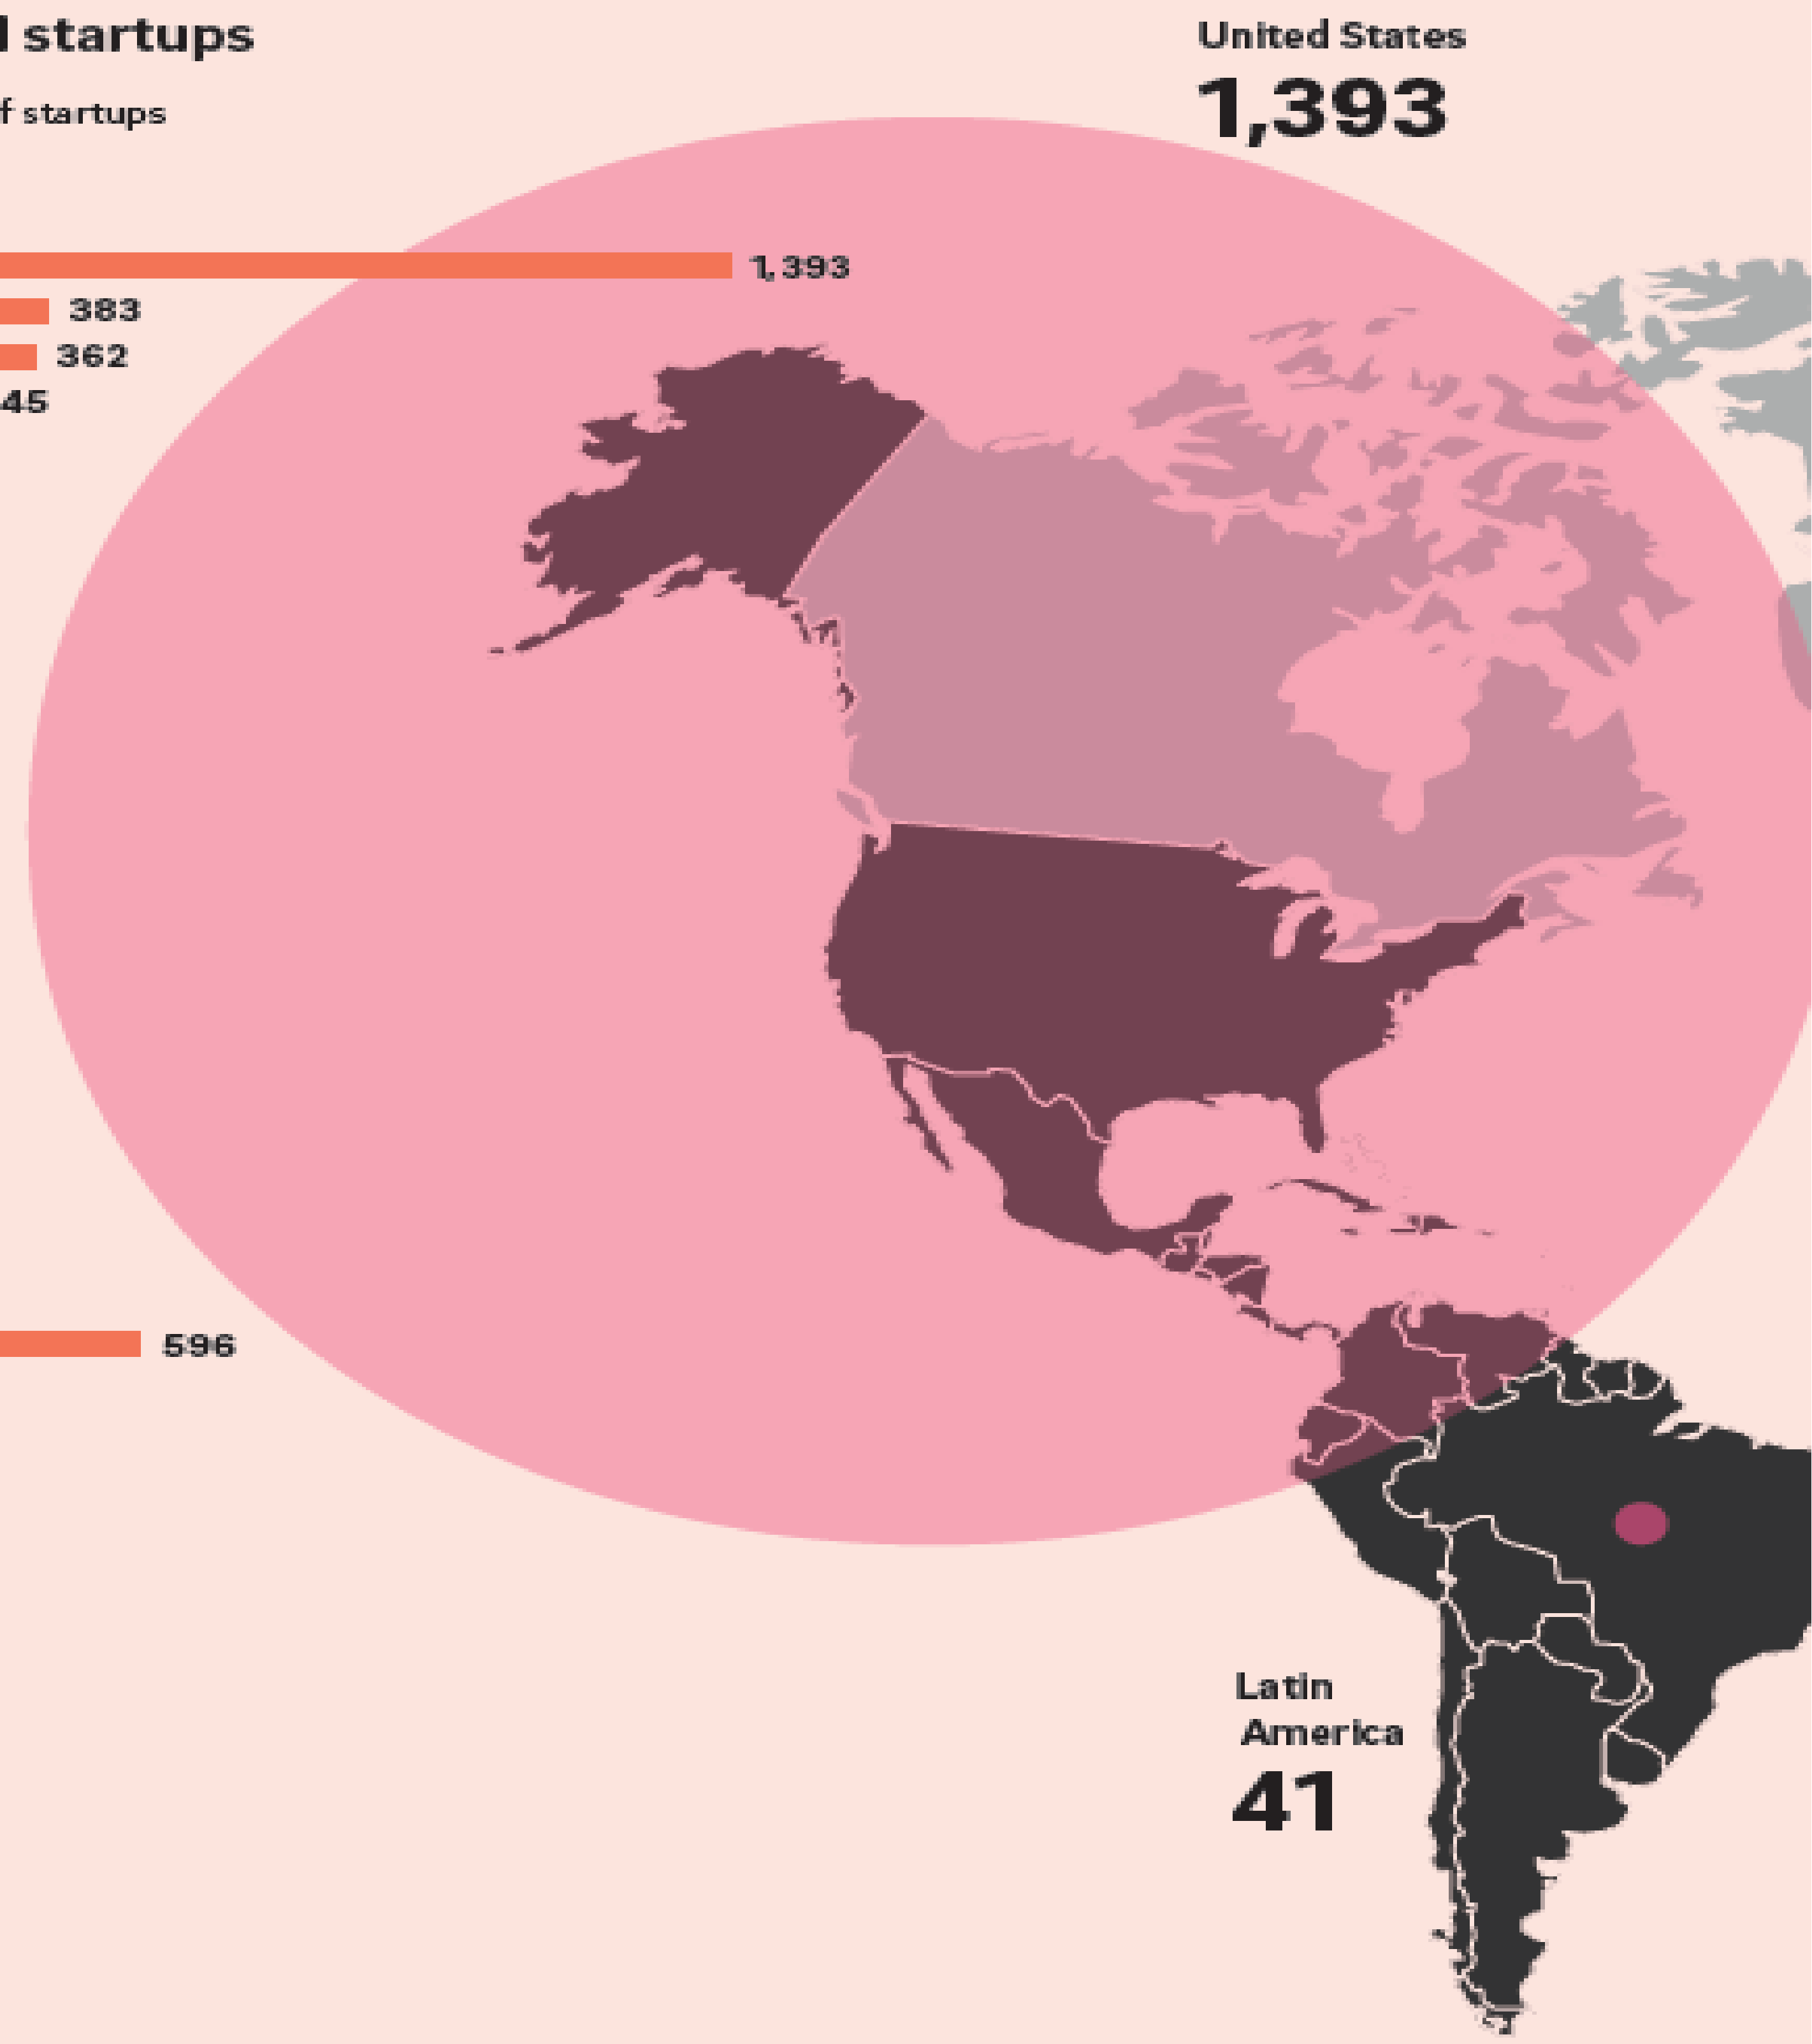

Top countries and cities by number of startups

Top countries

Top regional hubs

Cities' extended urban areas^{1,2}

¹ Regional hubs comprise a core city plus its extended urban area and wider agglomeration e.g. San Francisco plus Bay Area, London plus Oxford & Cambridge et al., Beijing plus Tianjin, Shenzhen plus Guangzhou et al., etc.
² Ranking excluding 180 startups for which information on city was not available – Among them, 130 are located in Israel

https://www.rolandberger.com/.../roland_berger_ai_strategy_for_european_startups.p...

B. Uneven disruption

Distribution of AI startups by industry

Europe

Worldwide

Source: Asgard, CB Insights, Crunchbase, Israeli startups shortlist, AI list Nordics and Baltic, Machine Intelligence 2.0, Chinese AI list, European AI landscape, German AI landscape, Israeli AI startup map, Japanese AI list, UK AI list, French AI ecosystem, Korean AI list, own research.

¹ Services include those applicable in all sectors for various business functions (Carbon Emission, Marketing, Security, HR, E-Commerce, Legal, etc.)

Global Investment Mechanisms in Artificial Intelligence

**Corporate
Venture Capital**

Angel Investors

Private Equity

Accelerators

There has been a lot of activity lately in this category as well with many new VC funds and angel groups being launched. Algebra Ventures, the largest Egyptian fund (\$50 million) that was announced made few investments last year and has been active this year as well, investing in [La Reina](#) & [POSRocket](#). Algebra's average ticket-size is \$500K or more, larger than most of the VCs currently active in Egypt.

تصدرت ثلاث شركات مصرية **قائمة** أهم 12 شركة ناشئة أفريقية يجب متابعتها في عام 2019 المقدمة بواسطة بوابة ديسرايت أفريقيا [Disrupt Africa] والتي تهتم بأخبار ريادة الأعمال والتكنولوجيا والاستثمار في أفريقيا.

جاءت على رأس القائمة وفي المركز الأول شركة **إلفز** [Elves - Your Personal Little Helper] وهي منصة دردشة تسمح للمستخدمين بالتحدث من خلالها الى مساعد بشري يستطيع القيام بأى شئ مجاناً وتقوم باستخدام تقنية " Human in loop" لدفع عجلة التعلم الآلي وبناء الذكاء الاصطناعي. حصلت الشركة على تمويل أولى بقيمة 2 مليون دولار بنهاية عام 2017، وساعدها ذلك فى النمو والتوسع فى عام 2018. جاء بالمركز الثانى شركة **شيزلونج** [Shezlong] وهي منصة للعلاج النفسى عن طريق الأنترنت، يستطيع المريض النفسى من خلالها التحدث مع الطبيب المختص عن طريق الفيديو على الجوال او الويب. كانت انطلاقة شيزلونج الحقيقية فى 2018 لأنها حصلت على استثمارات قدرها 350.000 دولار وتم قبولها فى مسرعة أعمال 500 Startups وتم اختيارها للمشاركة فى قمة مستثمرين أفريقيا.

وآخر شركة مصرية فى القائمة والتي جاءت بالمركز الثالث هي شركة **حالا**- [Halan] وهي شركة مواصلات مختصة فقط بالتوك توك والموتوسيكل. تقدر تطلب حالا توك توك وموتوسيكل عن طريق تطبيق على الهاتف. تم تأسيس شركة حالا فى 2017 ووصل عدد رحلاتها لثلاث مليون رحلة فى 2018. استطاعت حالا أن تحصل على استثمار بعدة ملايين فى 2018 ومتوقع لها أن تنافس بشدة فى سوق المواصلات فى

APPLY NOW TO UNICEF'S INNOVATION FUND AND RECEIVE UP TO \$100,000 IN SEED FUNDING

[Digitization](#), [artificial intelligence](#), [Startups](#), [fund](#)

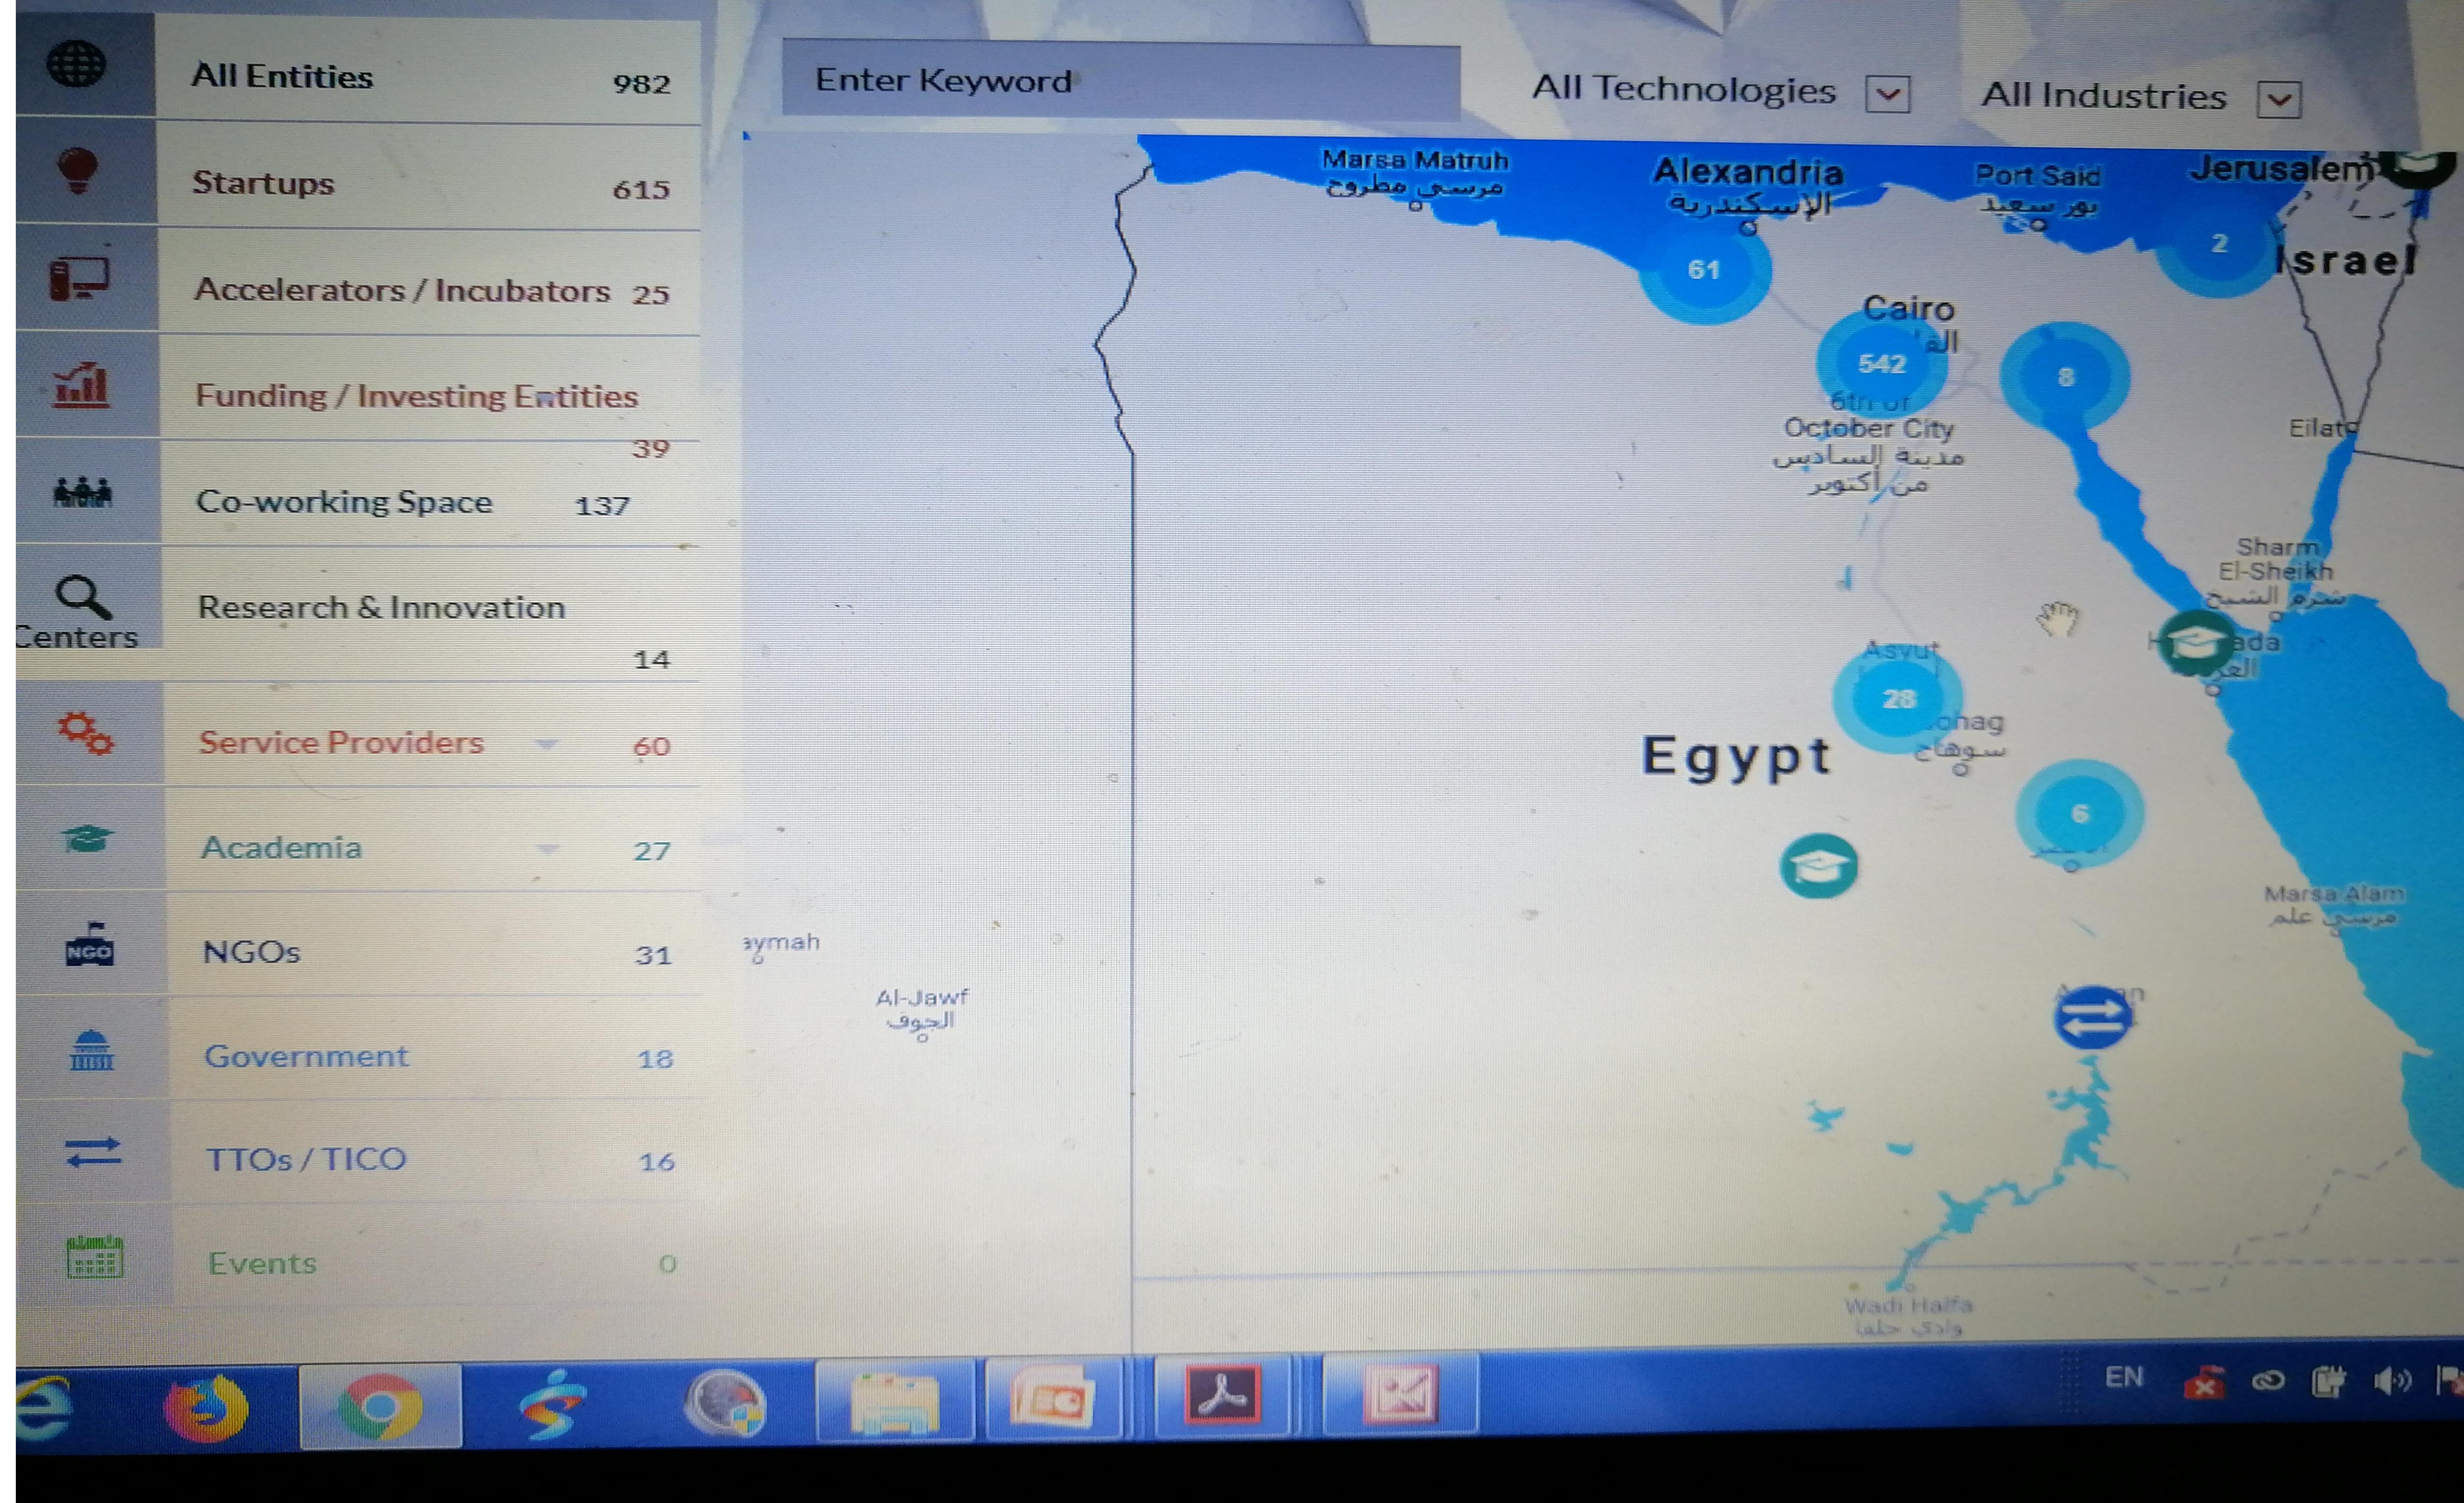

The United Nations International Children's Emergency Fund (UNICEF) is looking to fund early-stage startups that have an open source prototype and use data science, machine learning, artificial intelligence (AI) or similar technology to apply to its [innovation fund](#) program. Companies that are registered in [UNICEF's programme countries](#) can apply [here](#) before February 28.

Companies that use Data science and AI to understand the digital world, such as using Natural Language Processing (NLP) or similar techniques to analyze large amounts of text, or are encouraged to apply.

This innovation fund will provide up to \$100,000 equity-free seed funding, technical assistance from the UNICEF in product and technology development, and mentors to help startup teams develop their business model among other services.

Companies that can apply for this program aren't restricted to a specific description. UNICEF is interested in companies that apply data-science in new, groundbreaking, ways that are scalable, globally applicable, and can be
